DISPLAY & STORAGE EQUIPMENT

A **HANDBOOK**
of STEEL SHELVING SECTIONS

CATALOGUE C-174

Copyright, 1926, David Lupton's Sons Co.

Making it easy to buy *Standard Shelving Sections*

STEEL SHELVING, through modern methods of manufacture, has steadily declined in price, until it now costs little more than wooden shelving and, in the form of Lupton Standardized Sections stocked by your local dealer, it has become actually easier to buy and install.

Lupton Standardized Sections of shelving and counter can be combined in hundreds of ways. The sections illustrated in this book are those which use has shown to be the most popular.

Almost any desired arrangement of shelving and counter to meet practically any storage or display requirement may be built of the sections shown. Installations may be added to, a section or more at a time, and may be changed or adjusted as often as necessary. Sections may be dismantled for moving without loss or injury.

Lupton bin and shelving Sections are not only adaptable and interchangeable; they also combine strength, gracefulness and rigidity. They are of sound engineering design and are available at a price in comparison with which wooden equipment is expensive indeed.

As to construction, workmanship and finish, the Lupton trademark is a well-recognized guarantee of the satisfactory performance of any steel product that bears it.

DAVID LUPTON'S SONS COMPANY
PHILADELPHIA—CHICAGO

Main Office and Plant—David Lupton's Sons Company, Philadelphia

A LUPTON STANDARD SECTION FOR EVERY PURPOSE

THE five standard types of shelving and counter described below will be found suitable in varying combinations for practically every kind of storage or display. Whether you wish to store machinery or mattresses; canned goods or clothing; steam fittings or sheet music; whether you are a

manufacturer, assembler, wholesaler or retail dealer; whether you have an automobile plant or small store to outfit with shelving, you will find Lupton Standard Sections kept in stock that will fit your needs and be priced within your means. The finish on all Lupton equipment is a rich velvet-green enamel, oven-baked

Bin Type

Bin type shelving is recommended for a stock, each item of which requires a complete self-contained compartment. Uprights and backs are solid sheet steel; partitions to subdivide compartments may be added, as well as bin-fronts, card-holders, doors, counter-extensions and drawers. Details on pages 6 to 14.

Rack Type

Rack type shelving consists of an open arrangement of skeleton uprights and reinforced shelves, particularly suited for packages or boxes, and other large or irregular shaped items which do not require individual compartments. Standard Sections and details are described on pages 15 to 18.

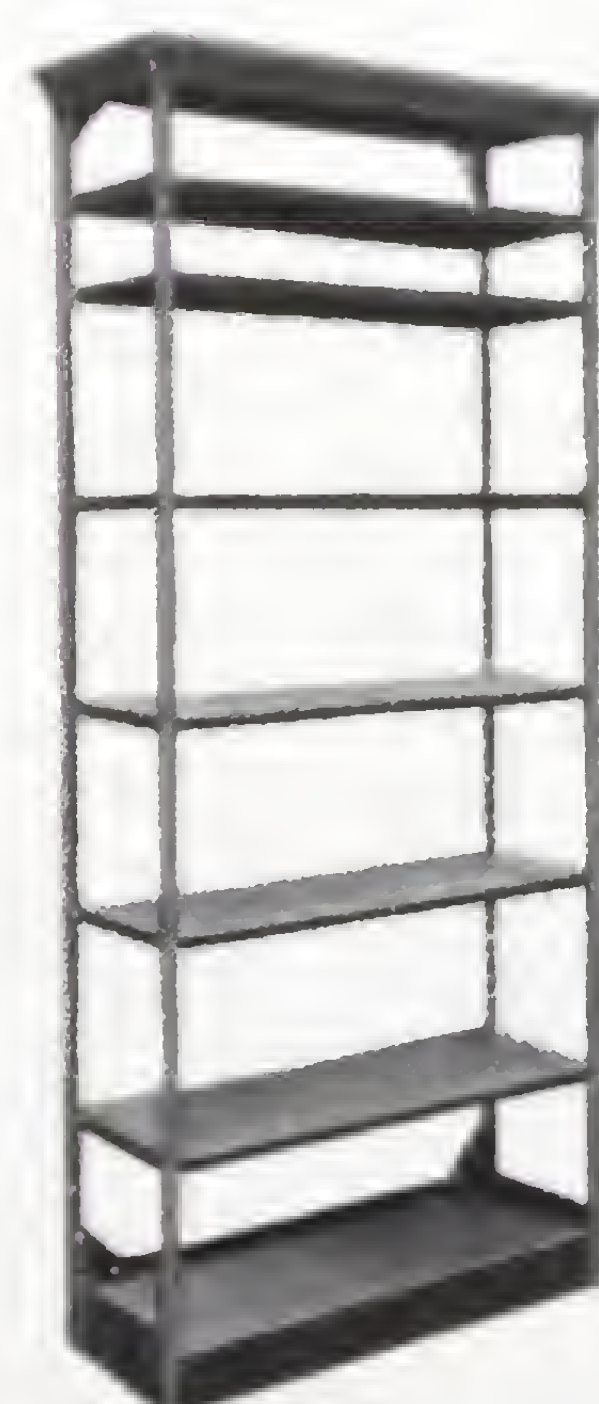

Unit Type

Each unit is an individual cabinet 3 ft. wide, 1 ft. deep and 7 ft. high, particularly adapted for storing small parts such as bolts and nuts. Units are shipped set up and ready to use.

Width of compartments is in multiples of 2", from 4" to 36" and spaces between shelves from 4½" up. Bin-fronts and card-holders are integral with the shelves. A wide choice of standard units of varying arrangement of bins and shelves is shown on pages 19 to 23.

Display Type

Display type shelving is lighter and of a more refined appearance than ordinary factory shelving and is widely used in retail stores. Shelves are adjustable and the parts may be dismantled for moving without injury. A handsome molded cornice is furnished for the top and a solid base at the bottom. Special end panels furnished for each end of a row further enhance the appearance of this attractive shelving.

For further details, see pages 24, 25 and 31

Steel Showcase and Counter

The Lupton Steel Display Counter is a 100% combination of serviceability and display value. It is sturdy, graceful, practically indestructible, and displays its contents attractively for sale. As shown, inside and outside corners may be had, and where display is not needed, steel fronts, partitions and doors may be added to form plain storage counter. Single, end, and intermediate units are all 3 feet long and are readily interchangeable to suit any floor plan.

Complete description of Lupton Showcase and Counter with stock sizes will be found on pages 26 and 27.

LUPTON BIN TYPE SHELVING

How to Select the Correct Sections for Your Needs

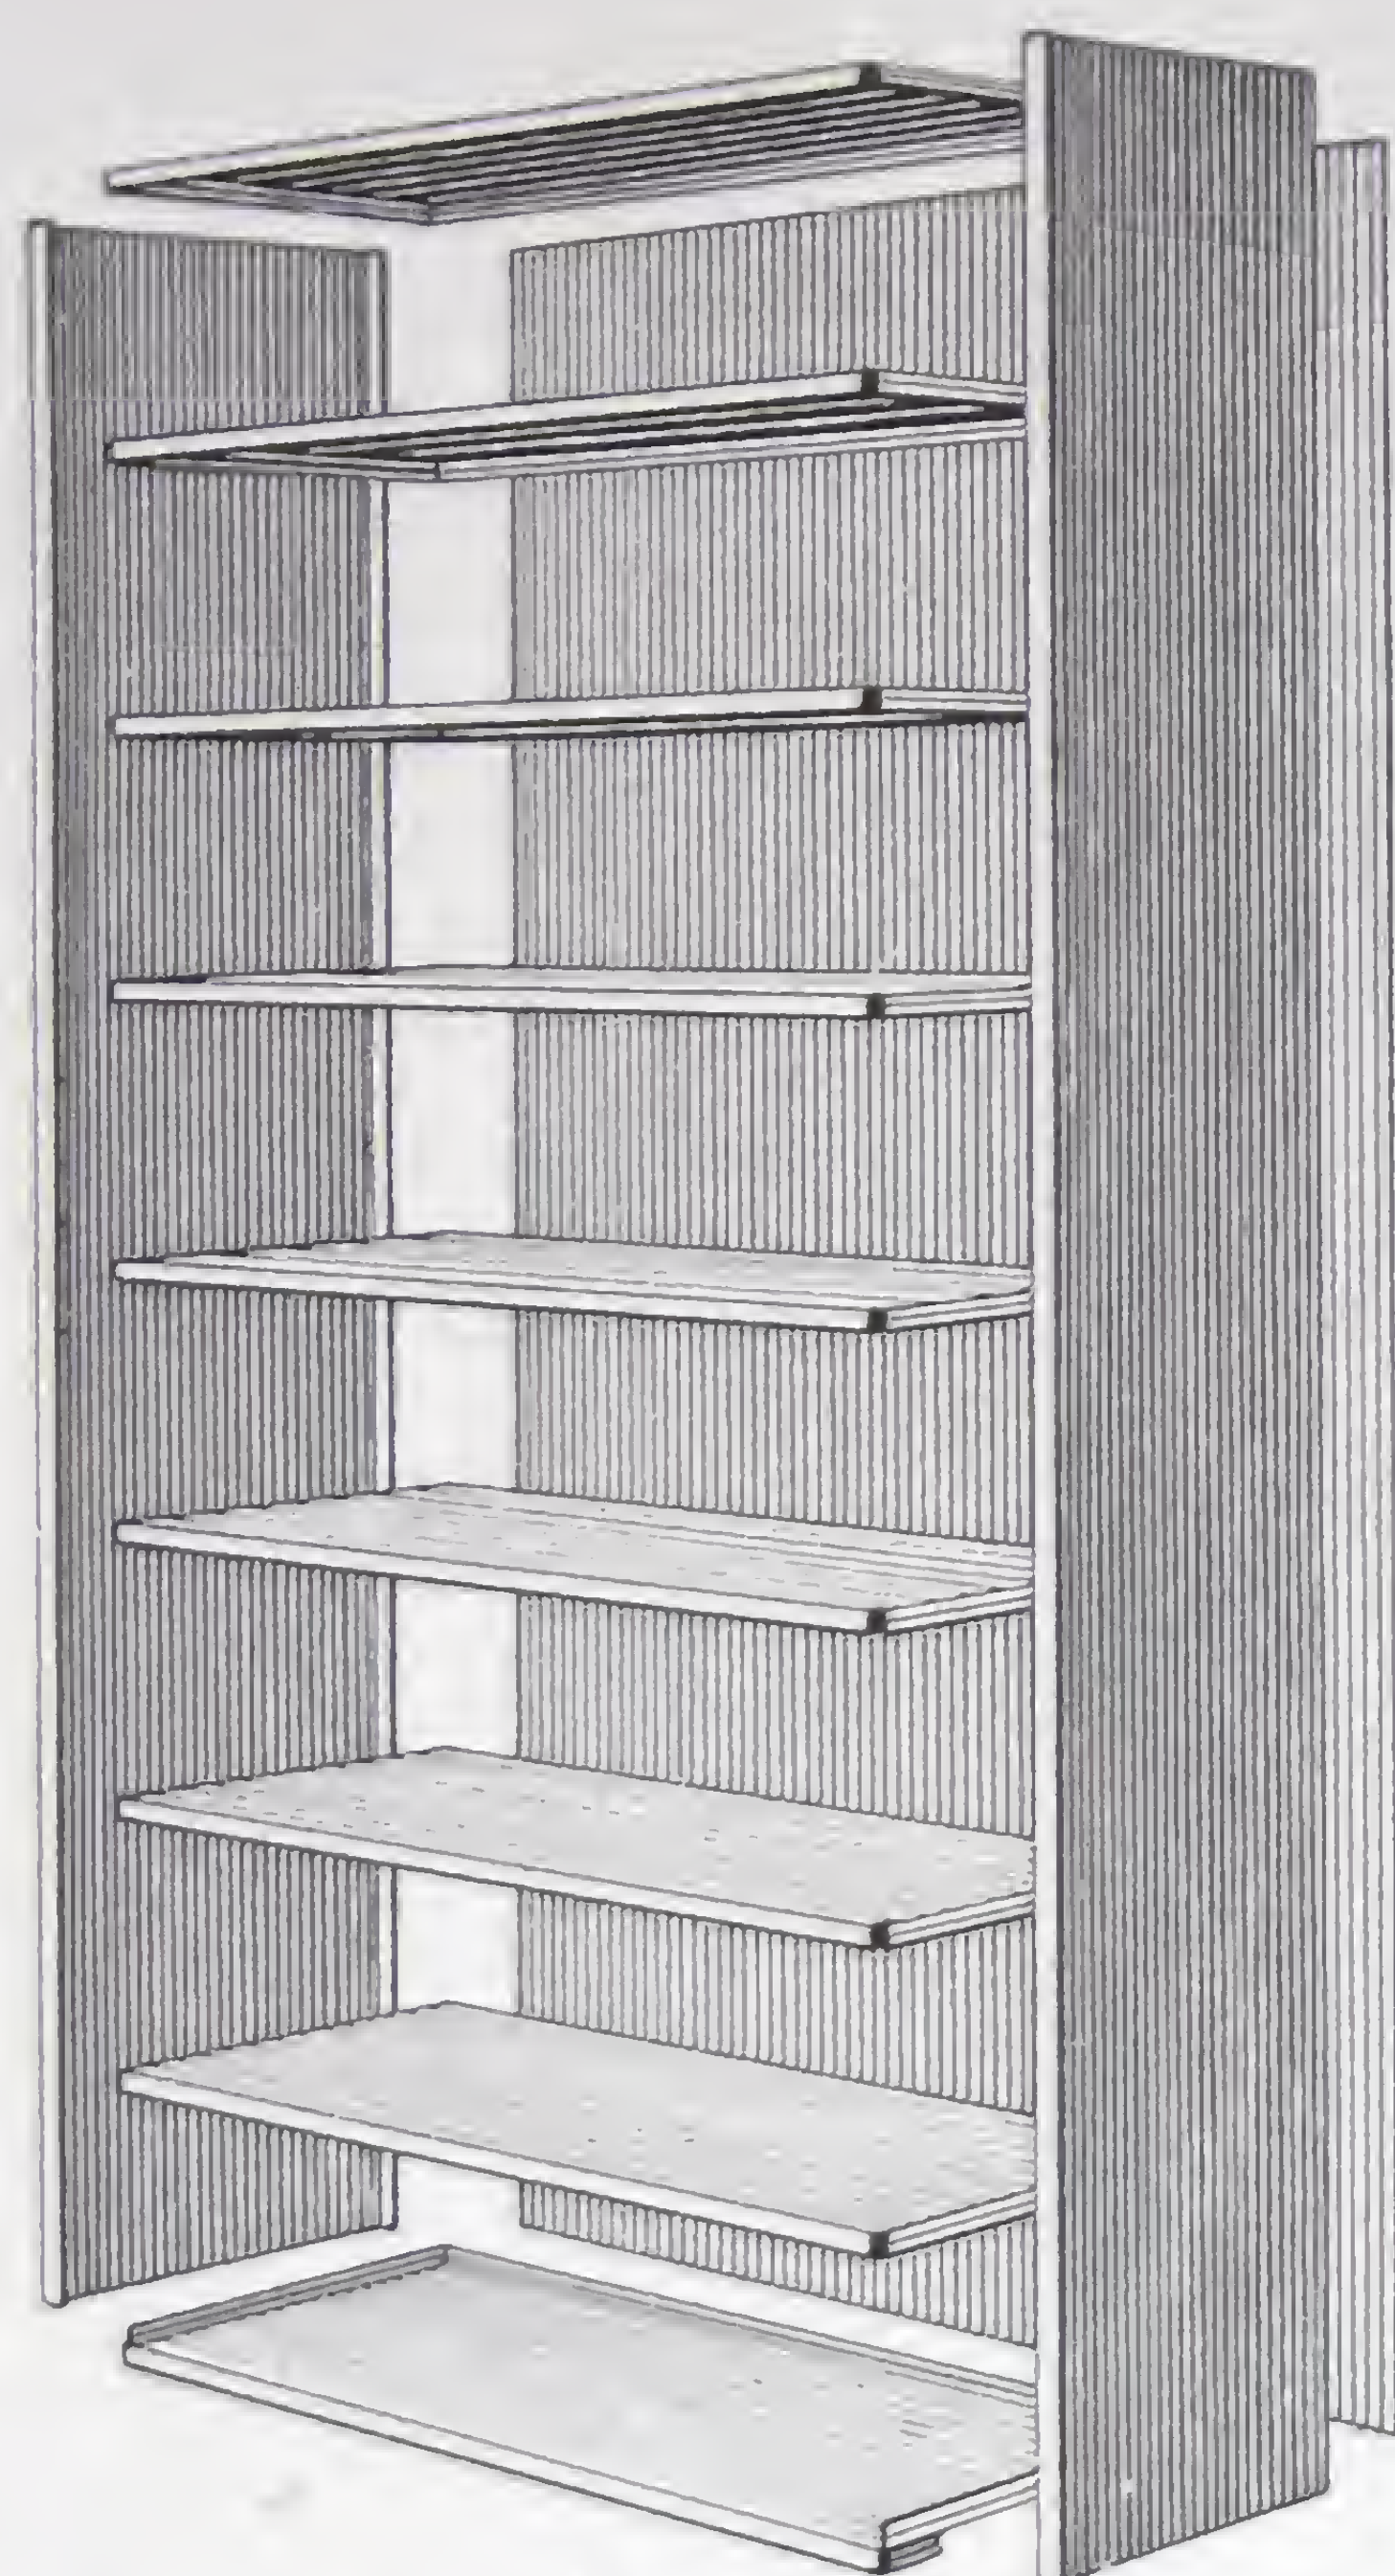

Fig. 1
Basic Parts
Uprights, Back and Shelves.

Illustrations on this and the opposite page show Bin Type Shelving and make clear the difference between "Starting" and "Additional" Sections and "Single Faced" and "Double Faced" Sections, as referred to in the following pages.

Each Section consists of the necessary uprights and shelves, etc., to build 3 ft. of shelving. In each row of shelving only the first Section is a Starting Section.

Dividers and other parts to form bins or compartments of the exact size, shape and location desired may be added to the basic parts shown in Figure 1. Three depths—12", 18", and 24"—are quoted for each bin arrangement.

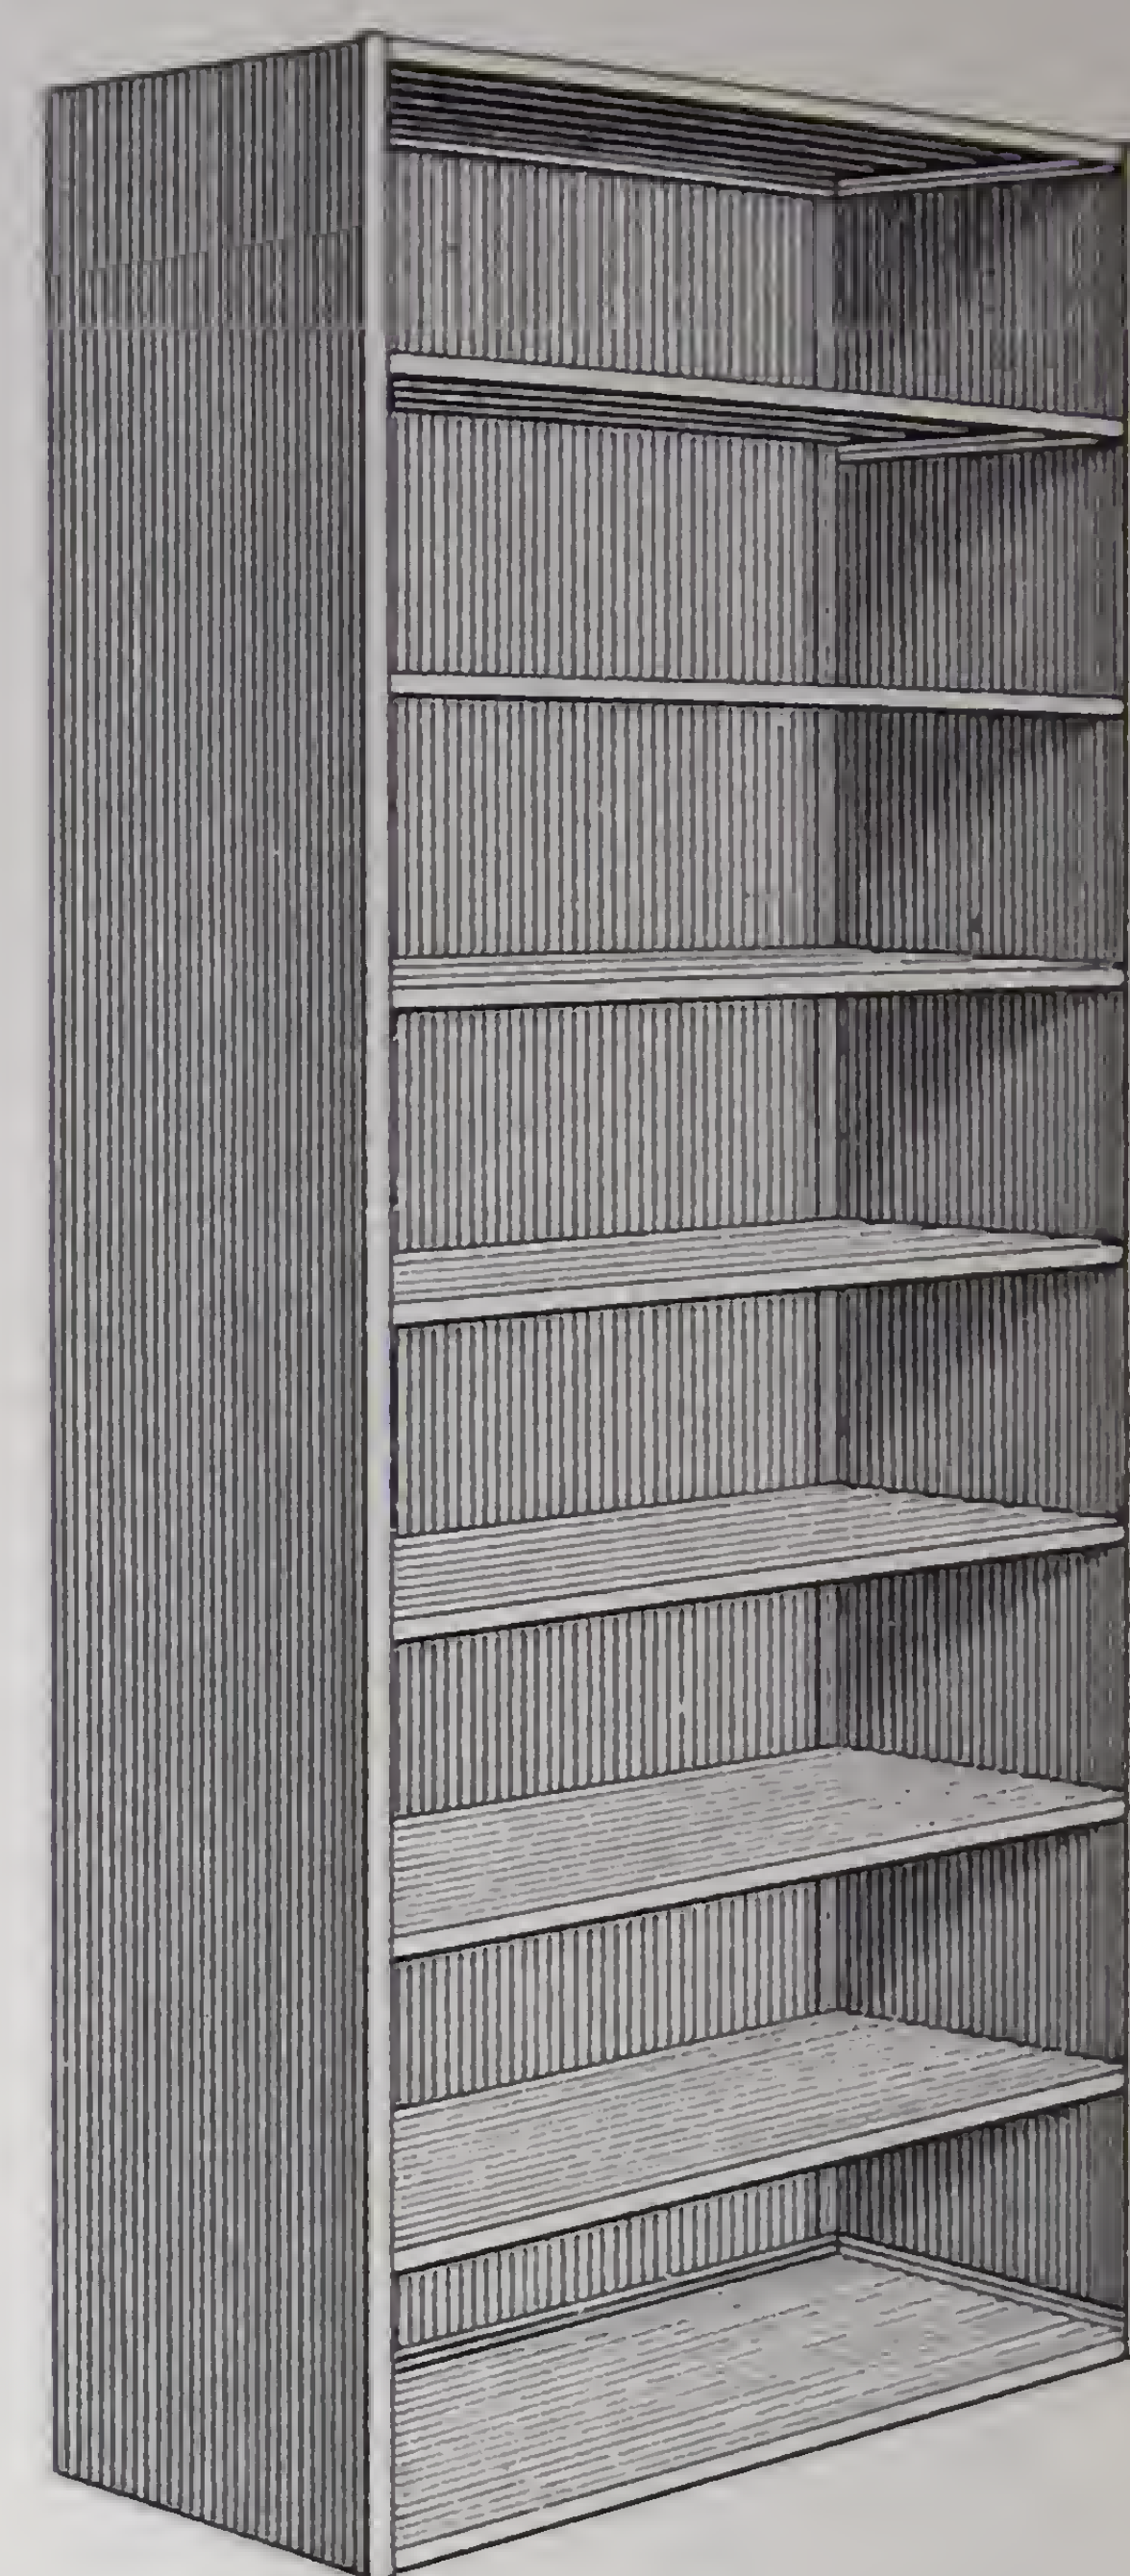

Fig. 2
Starting Section, Single Faced Assembled of Basic Parts shown in Fig. 1, Plain Shelves.

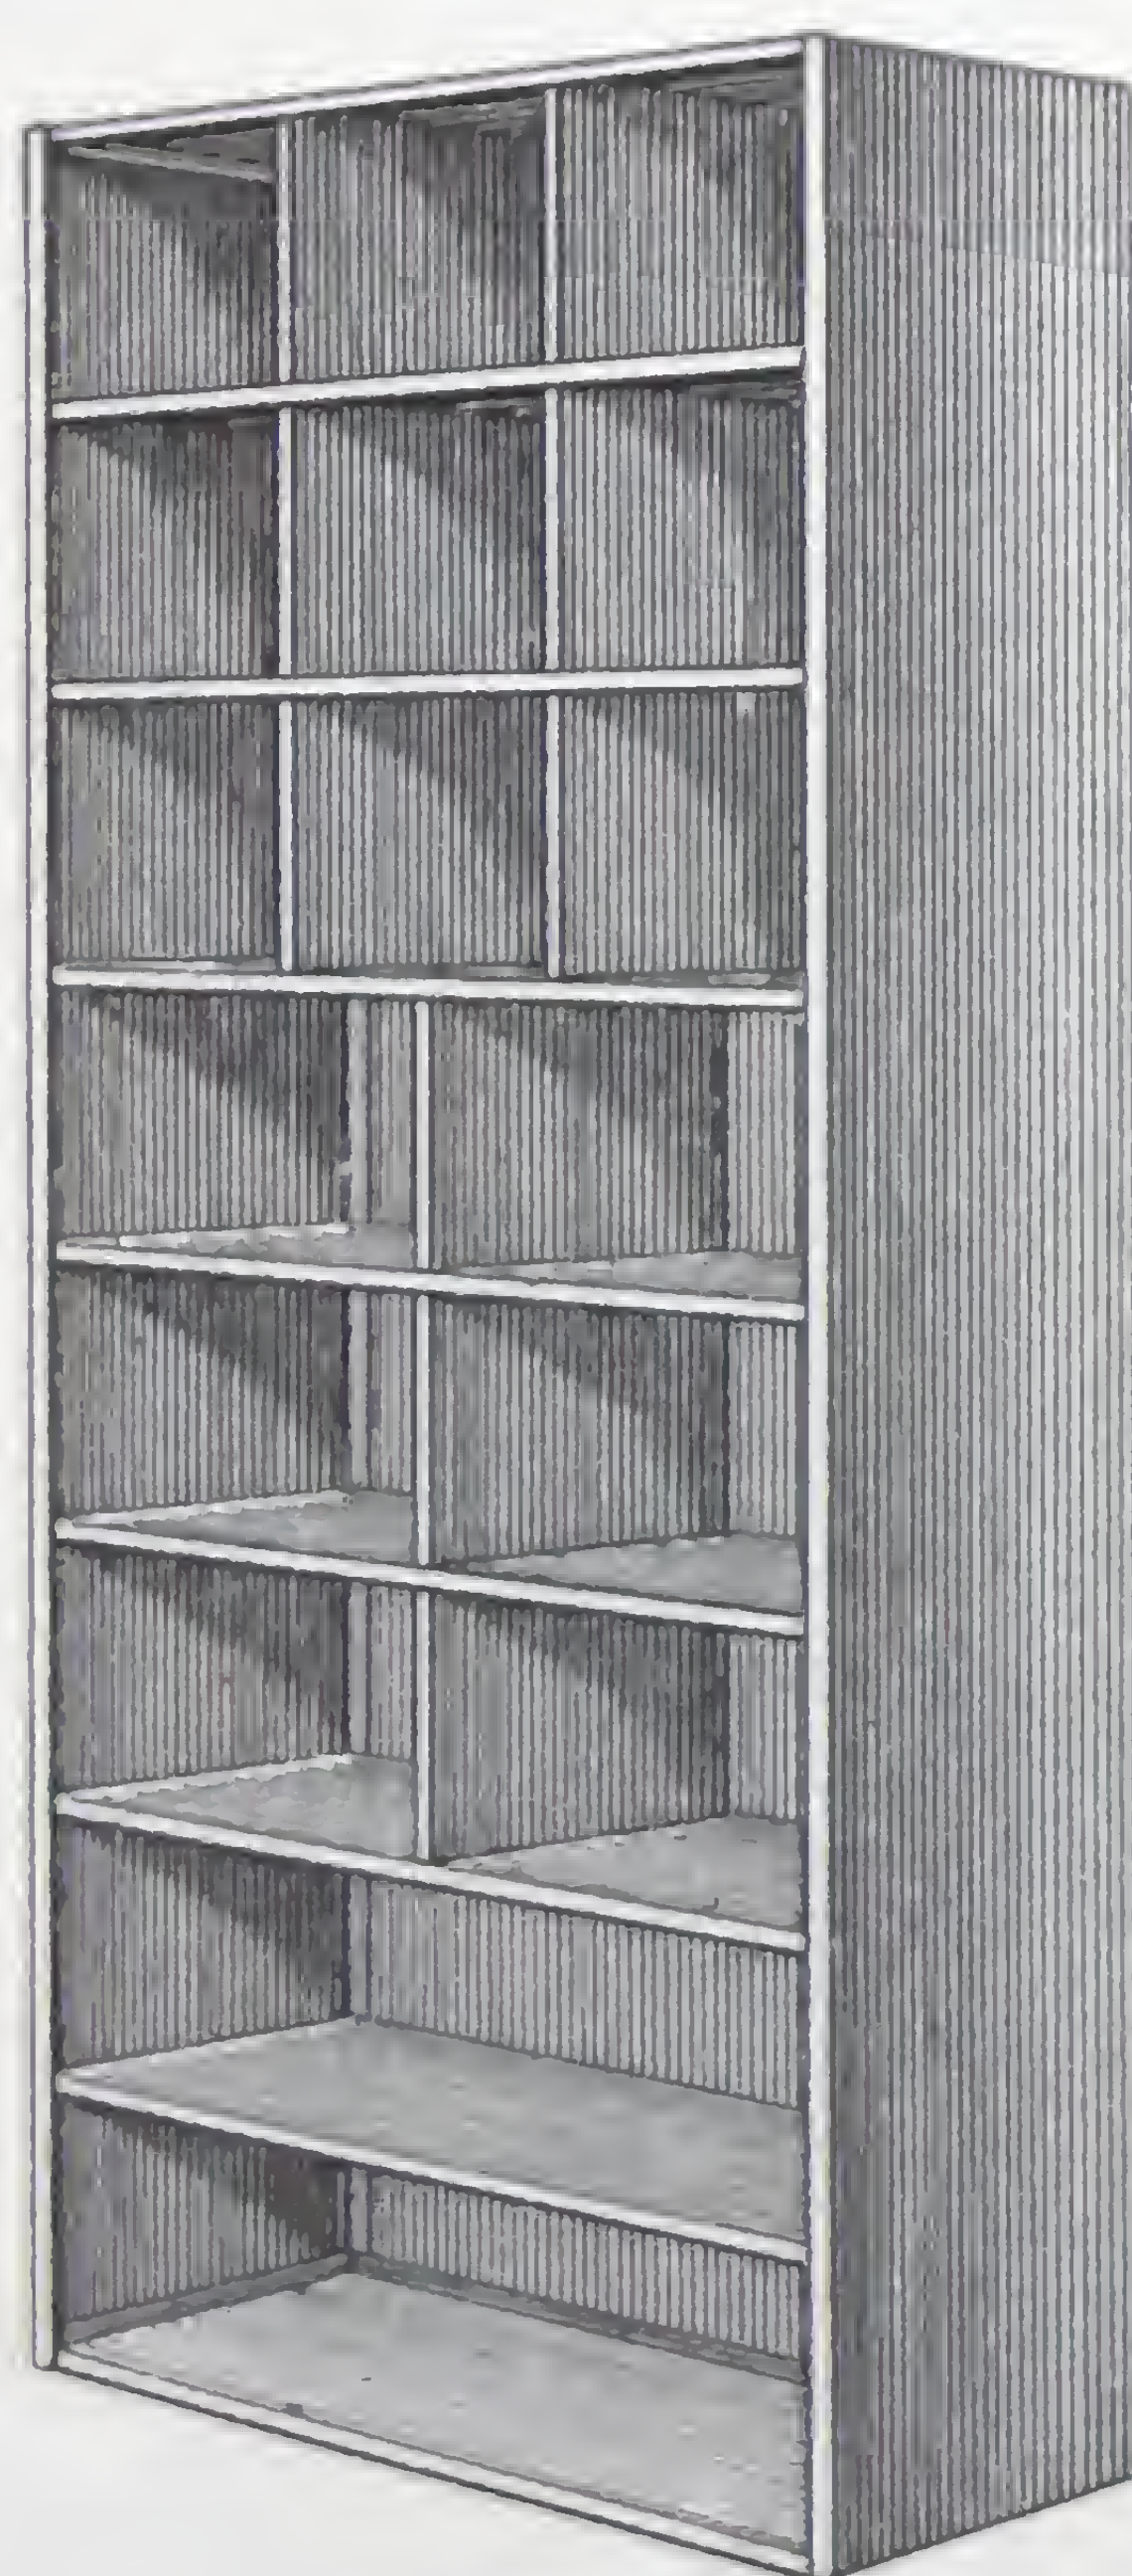

Fig. 3
Starting Section, Single Faced. This illustration shows a starting section with Dividers or Partitions added to form more compartments.

Any sections of the same height and depth may be connected by bolting together to form an assembly. By selecting the sections best suited to your needs you can start as modestly as you choose and add to your installation as becomes necessary.

By the addition or replacement of a few parts any of the sections shown on the following pages may be converted to any other section of the same depth.

You have only to select the height, depth and bin arrangement best suited to your requirements and you can then easily erect your shelving upon delivery as shown in the illustrations or in any different arrangement which may recommend itself to you.

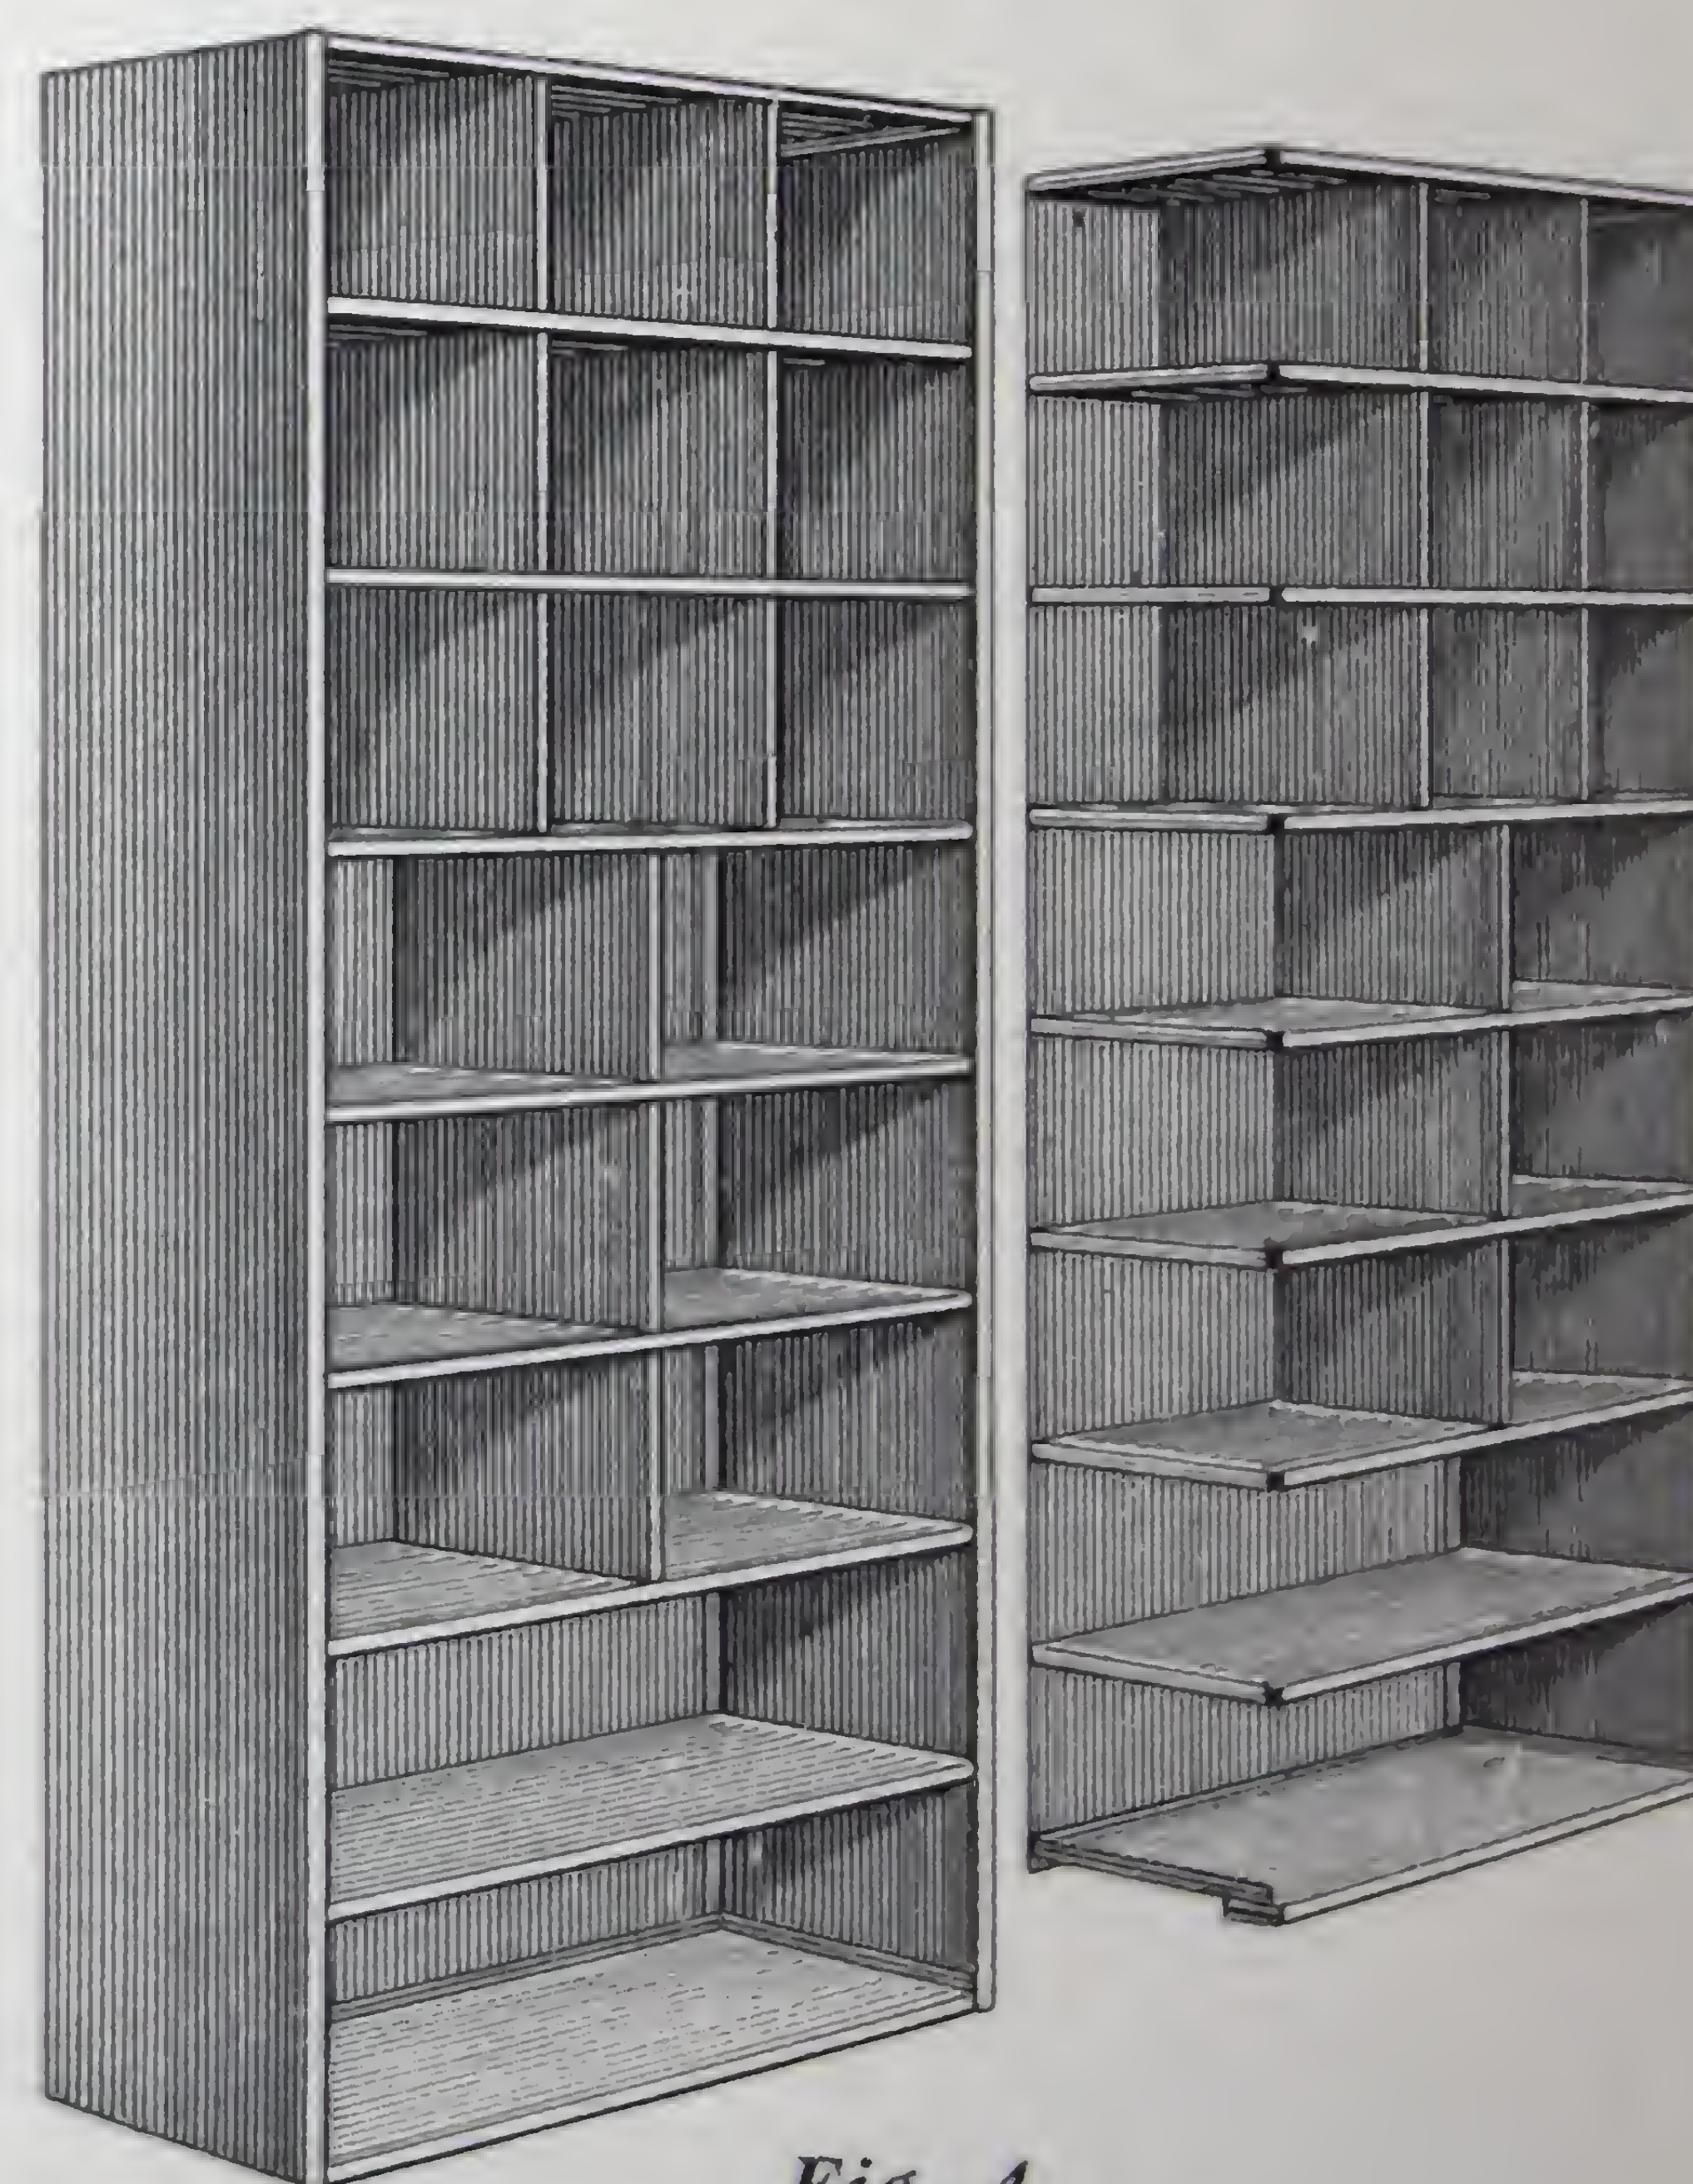

Fig. 4
Additional Section
Right, an Additional Section, Single Faced. Additional Sections may be any sections of the same depth and height. They are the same as the starting sections except for the omission of one upright.

ALL LUPTON SECTIONS (except Unit Type) ARE SHIPPED KNOCKED DOWN AND CRATED with necessary bolts and nuts and erection instructions. An open-end or socket wrench and screw driver are the only tools needed and the operation is so simple that it can be performed by anyone.

Double Faced Arrangement of Sections

When sections are placed in the center of the room in *Double Faced* or back-to-back arrangement, the back of the first unit may be used for two sections.

Any two sections of the same height may be placed back-to-back in this way.

The *Starting Section, Double Faced*, is the same as the *Starting Section, Single Faced*, except for the omission of the back.

An *Additional Section, Double Faced*, as shown, requires no back and only one upright.

If in doubt as to the correct number of different sections required, send us a rough sketch showing the proposed floor plan and we will then select and ship the proper Starting and Additional, Single and Double Faced Sections.

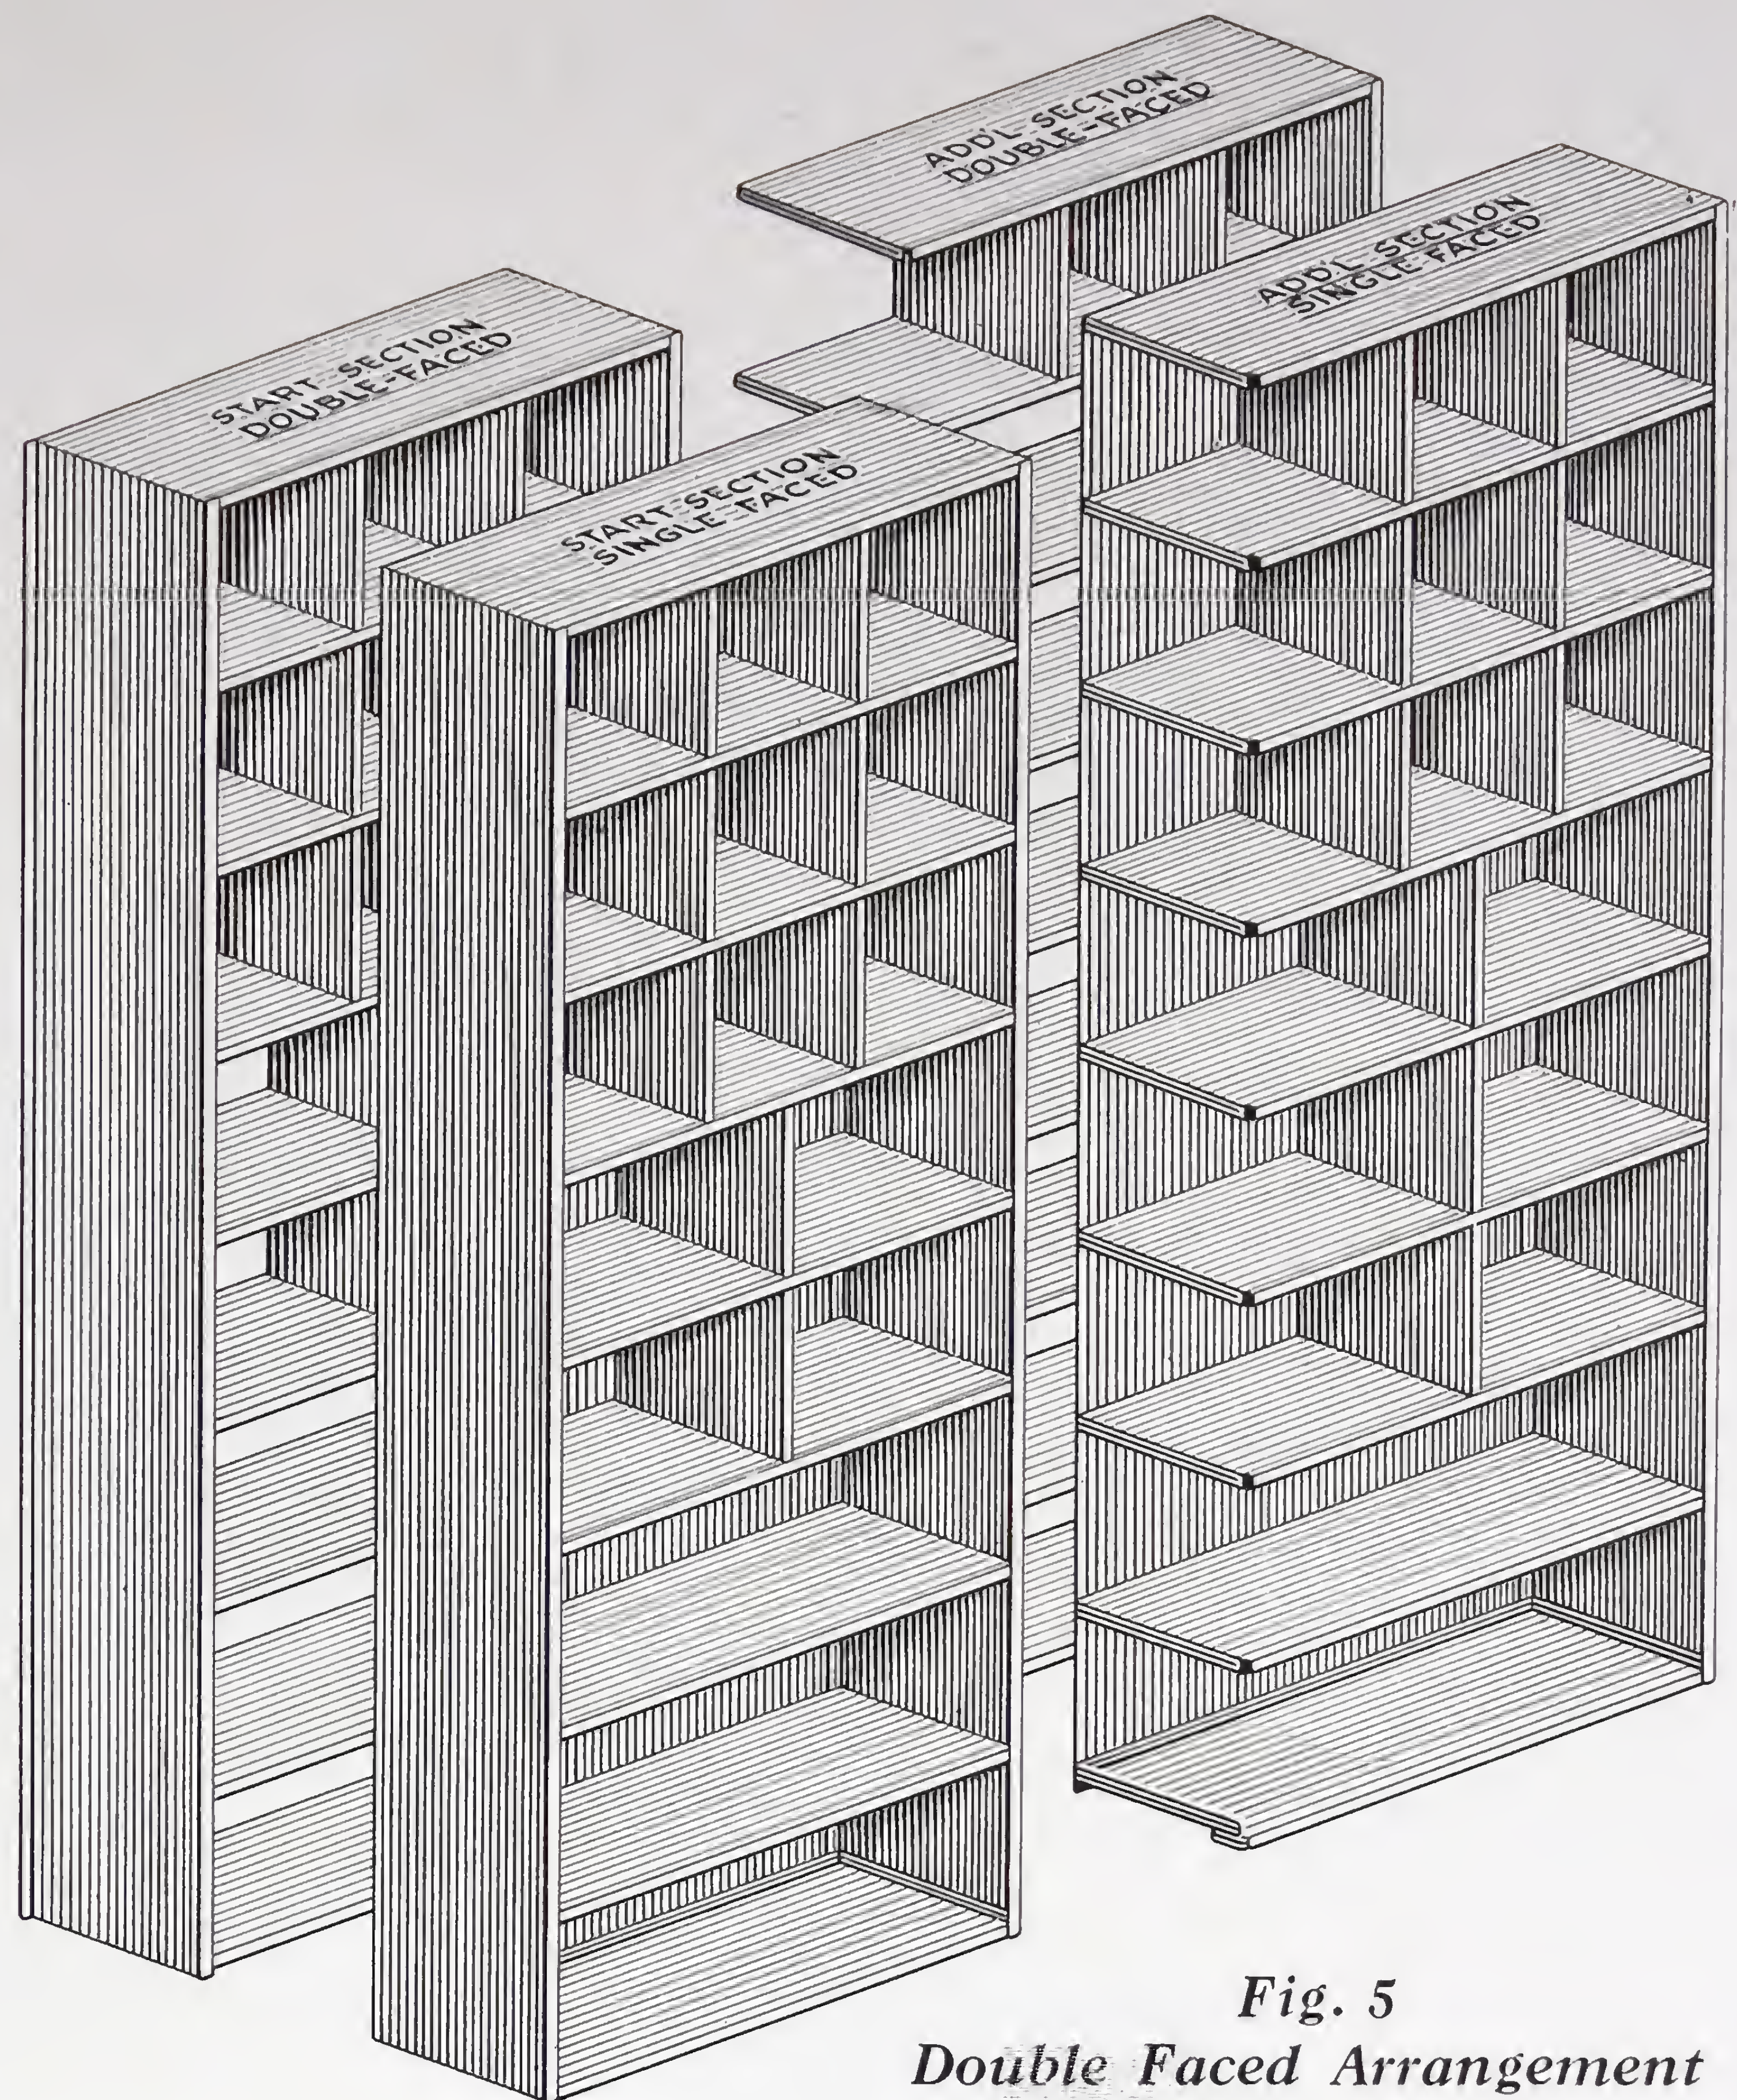

Fig. 5
Double Faced Arrangement

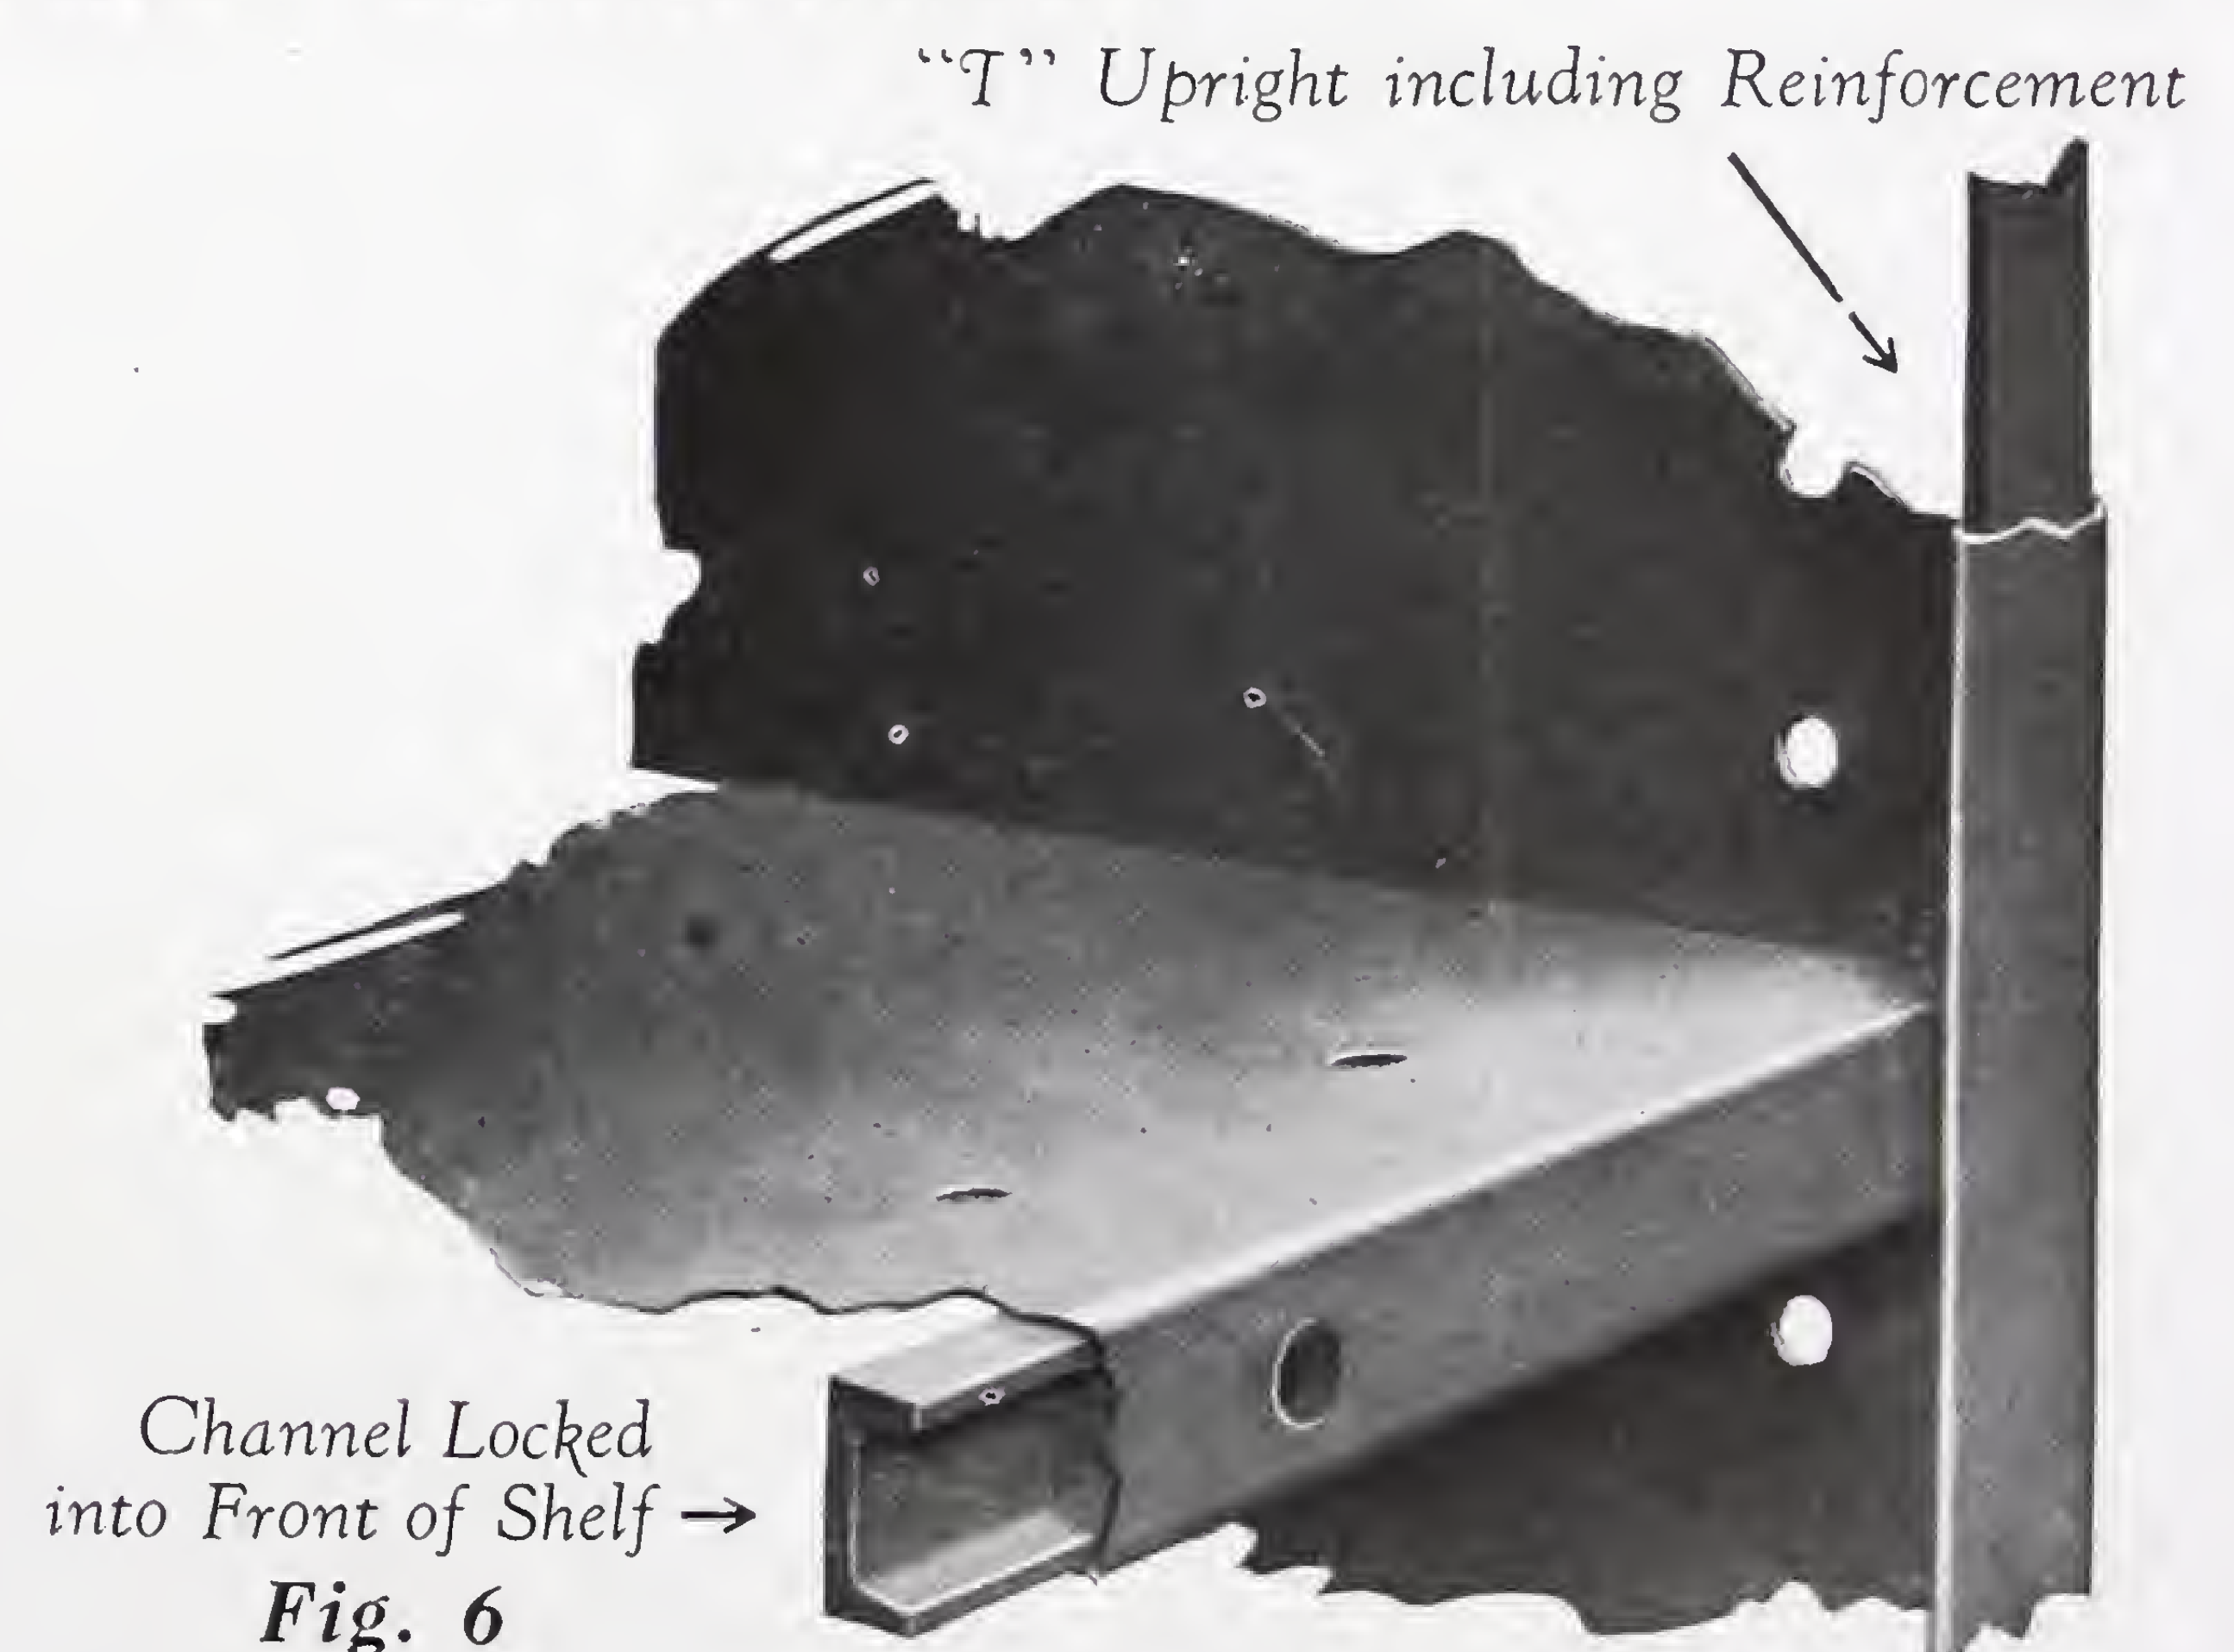

LUPTON BUILDS STRENGTH INTO SHELVING *by the "column and girder" construction*

REINFORCEMENTS are scientifically built into the uprights and shelves to prevent buckling or distortion even under the heaviest loads. The upright is a solid sheet of steel, molded at the front into a "T" inside of which is permanently enclosed a flat reinforcing bar of carbon steel. The effect is a T-bar construction of great stiffness.

The front edge of the shelf is similarly reinforced with an enclosed 1" channel spanning the entire width and bolted securely to the upright.

Strength of the kind required is concentrated where it is most needed and without the waste of space.

The upright is flanged and bolted to the back, which is a flat steel sheet punched for the attachment of shelves. Shelves are also bolted to the back as well as to the upright. This forms a "column and girder" construc-

tion using the steel most economically and without unnecessary thickness of vertical or horizontal members.

Shelves and uprights are shipped with reinforcing members built in and erection is reduced to a few simple operations.

Shelf adjustment (vertical) is on 1½" centers. Divider adjustment (horizontal) is on 3" centers.

ATTACHMENTS FOR BIN SECTIONS

Fig. 7

Bin Fronts and Card Holders

BIN Fronts, used to form Bins for contents that might otherwise roll out, are 1½", 3" and 6" high. They may be added to or removed when desired without disturbing shelves or dividers.

Card holders, as shown may be attached to the Bin Fronts—or, if no Bin Fronts are used, to the Shelf Front, and are used to index contents of bins.

For prices, see page 14.

Fig. 8

Drill and Reamer Rack

For drills, reamers, arbors, etc. Contains 120 inclined compartments, 6 bins 12x9 and 18 drawers 6x3x12. Each compartment and drawer is indexed. Five inch solid base.

Dimensions: 3 ft. wide, 1 ft. deep, 8 ft. high. May be assembled with any section of same depth and height.

PRICE

Starting Section No. 611	\$83.00
Shipping Wt. 425 lbs.	
Additional Section No. 612	79.10
Shipping Wt. 400 lbs.	

Fig. 9

Counter Extension

Lupton Counter Extension or ledge is 39" high and 9" deep. It may be added to any Bin Type Section. It serves the multiple purpose of

1. A runway to walk on when shelving is 10 ft. high.
2. Providing two depths in one row of shelving.
3. A rest for containers of small parts while they are being loaded or emptied.

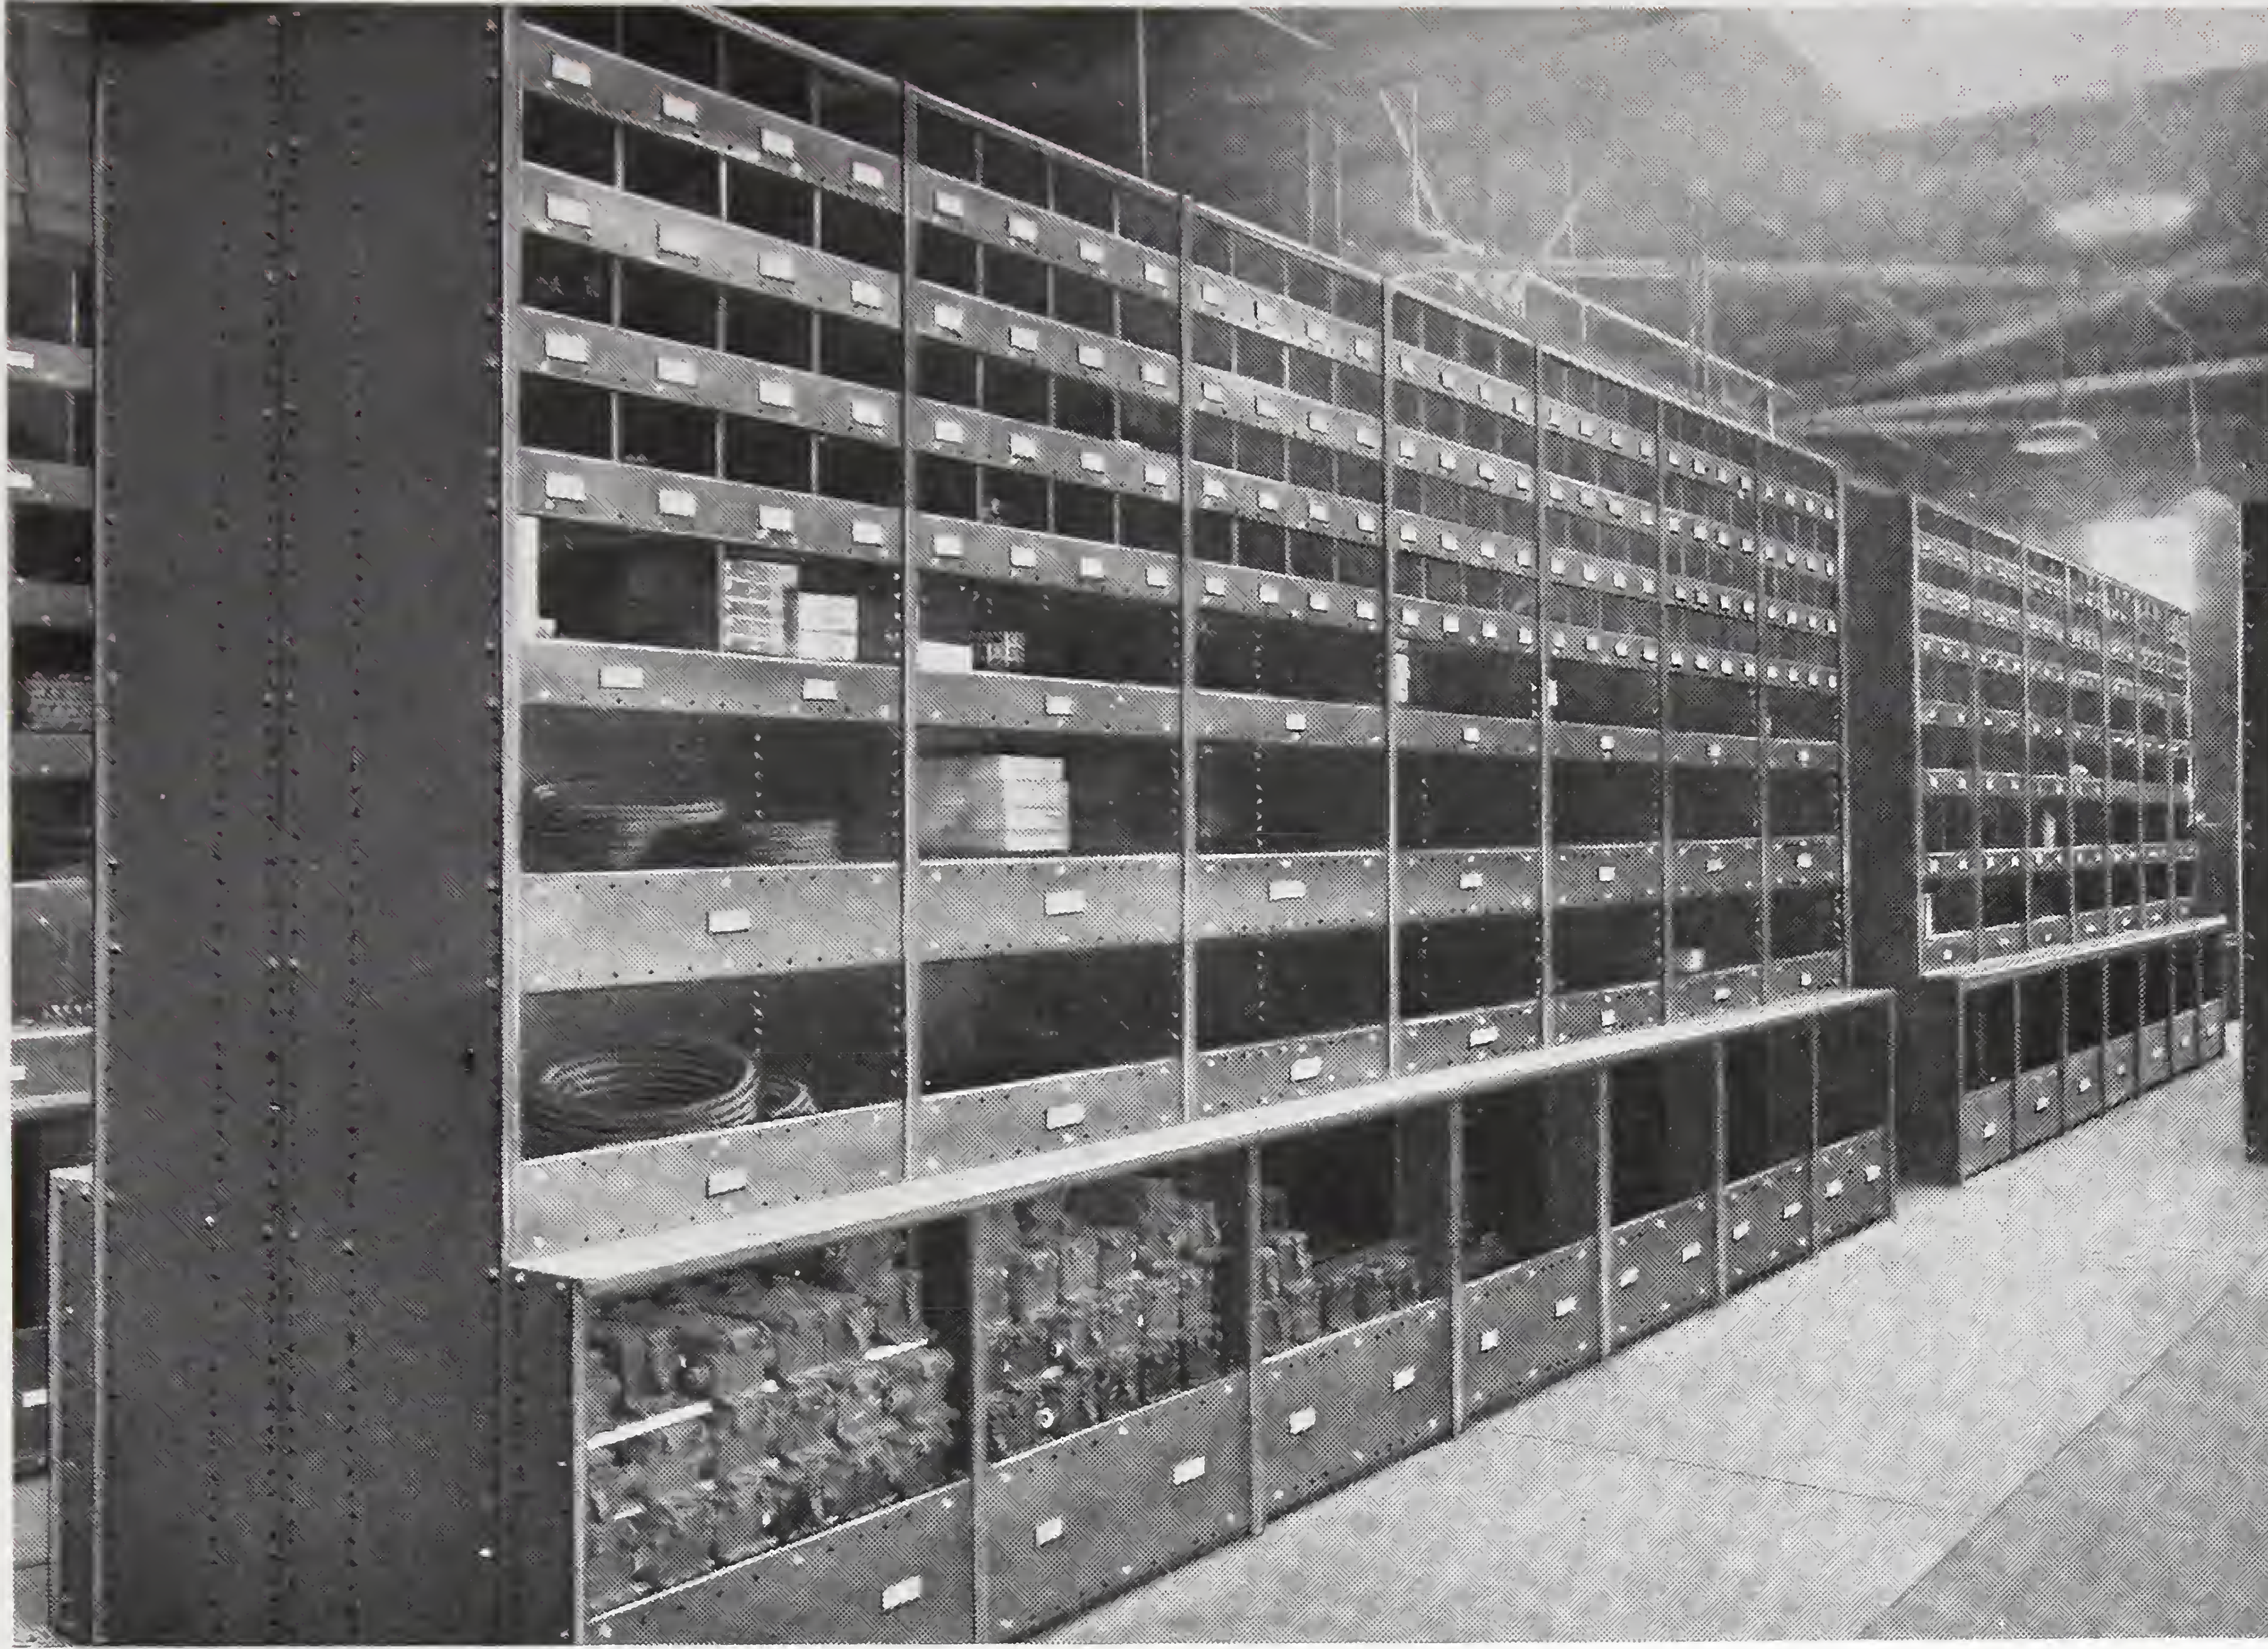

Uprights, Shelves and Dividers used in Counter Extensions are built to line up clear thru with the Sections behind, and to make a strong workmanlike job. Counter extensions are convenient in certain installations but being somewhat wasteful of floor space are not recommended unless a real need for them exists.

BIN TYPE SHELVING IN USE

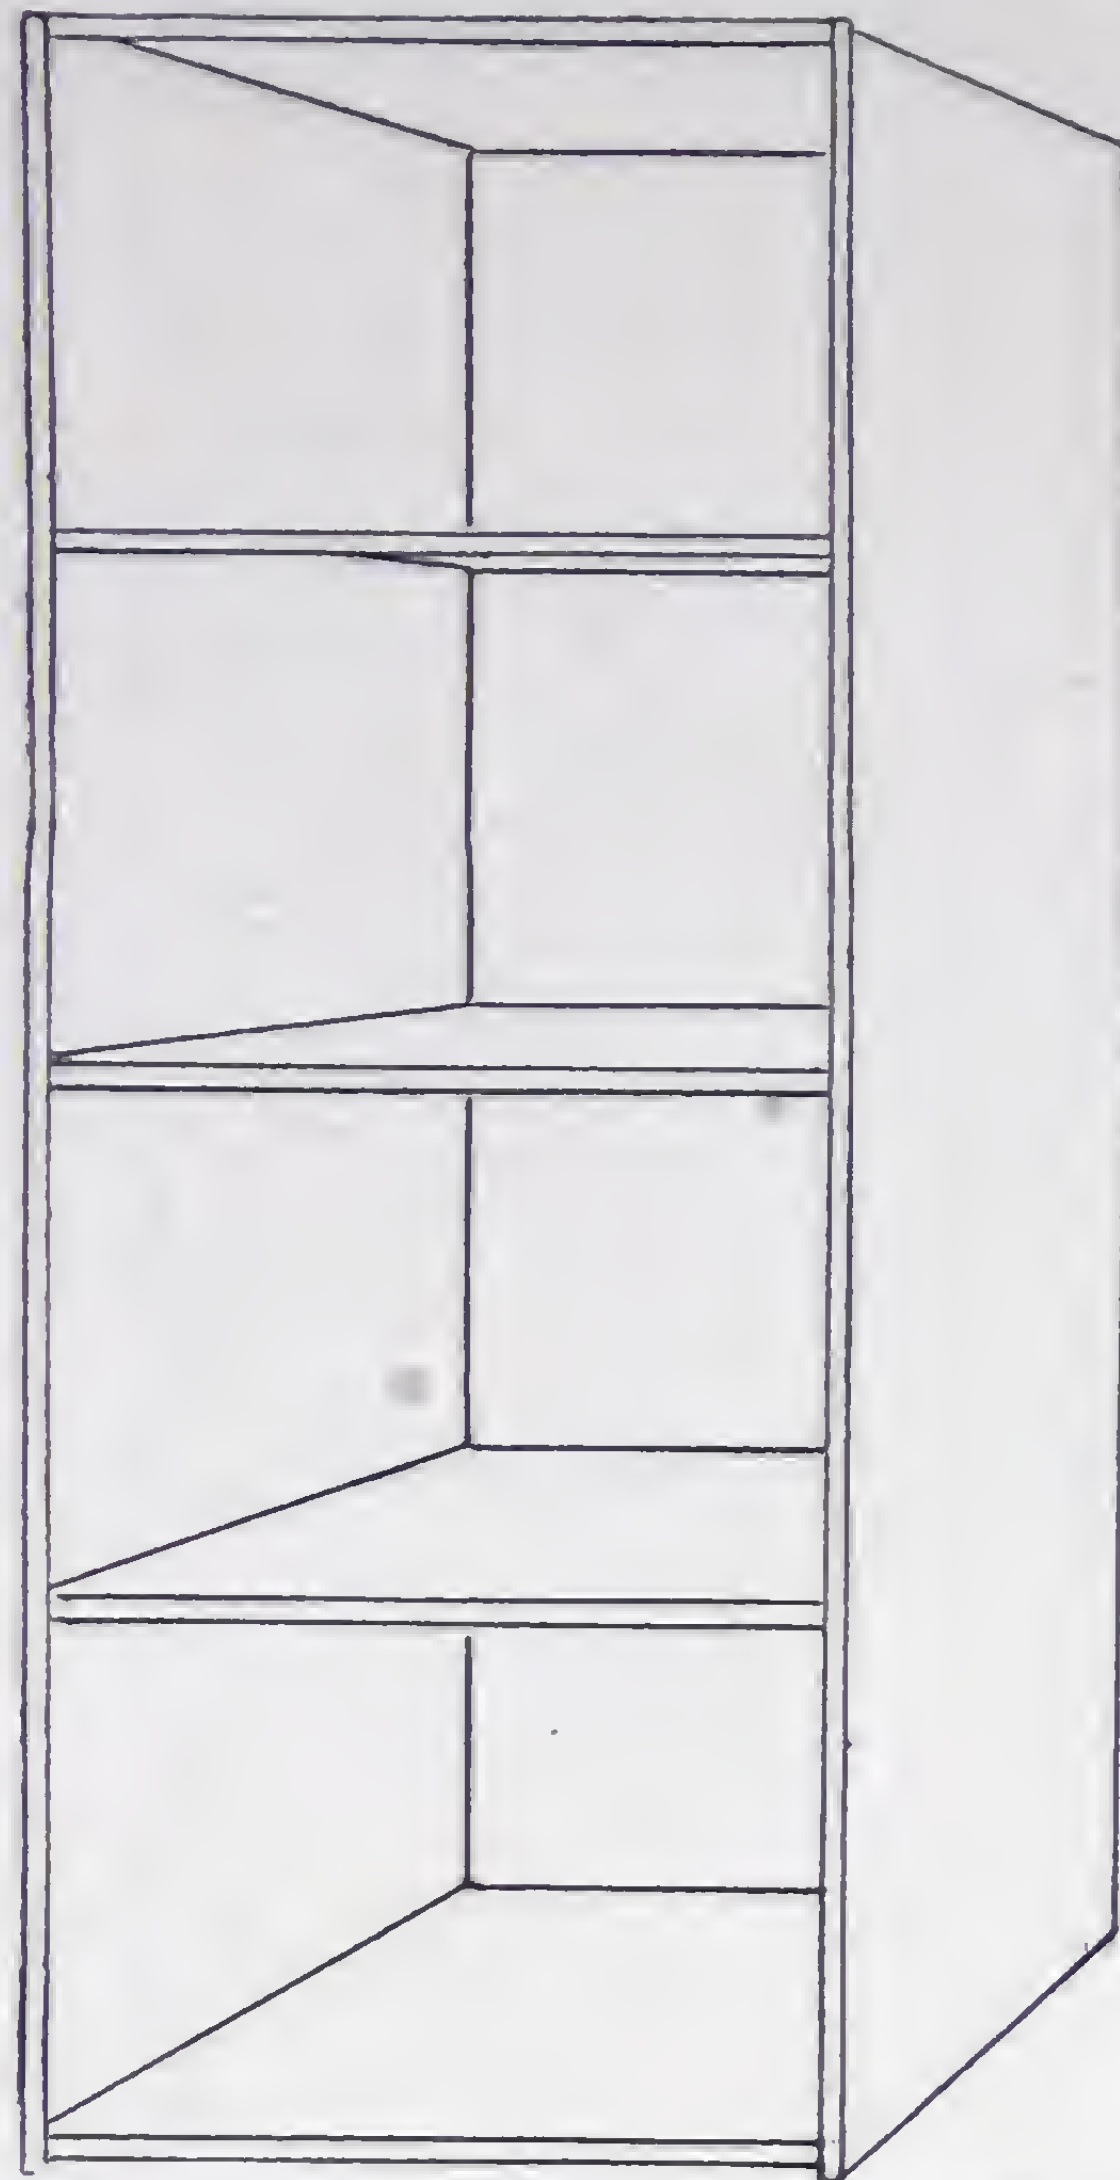

METROPOLITAN Edison Company, Reading, Pa. Here large bins provide for the storage of bulky and heavy parts, and Bin Dividers, added to the upper shelves, take care of the storage of smaller parts. Counter Extensions increase the storage capacity, as well as provide means of reaching upper shelves without ladders.

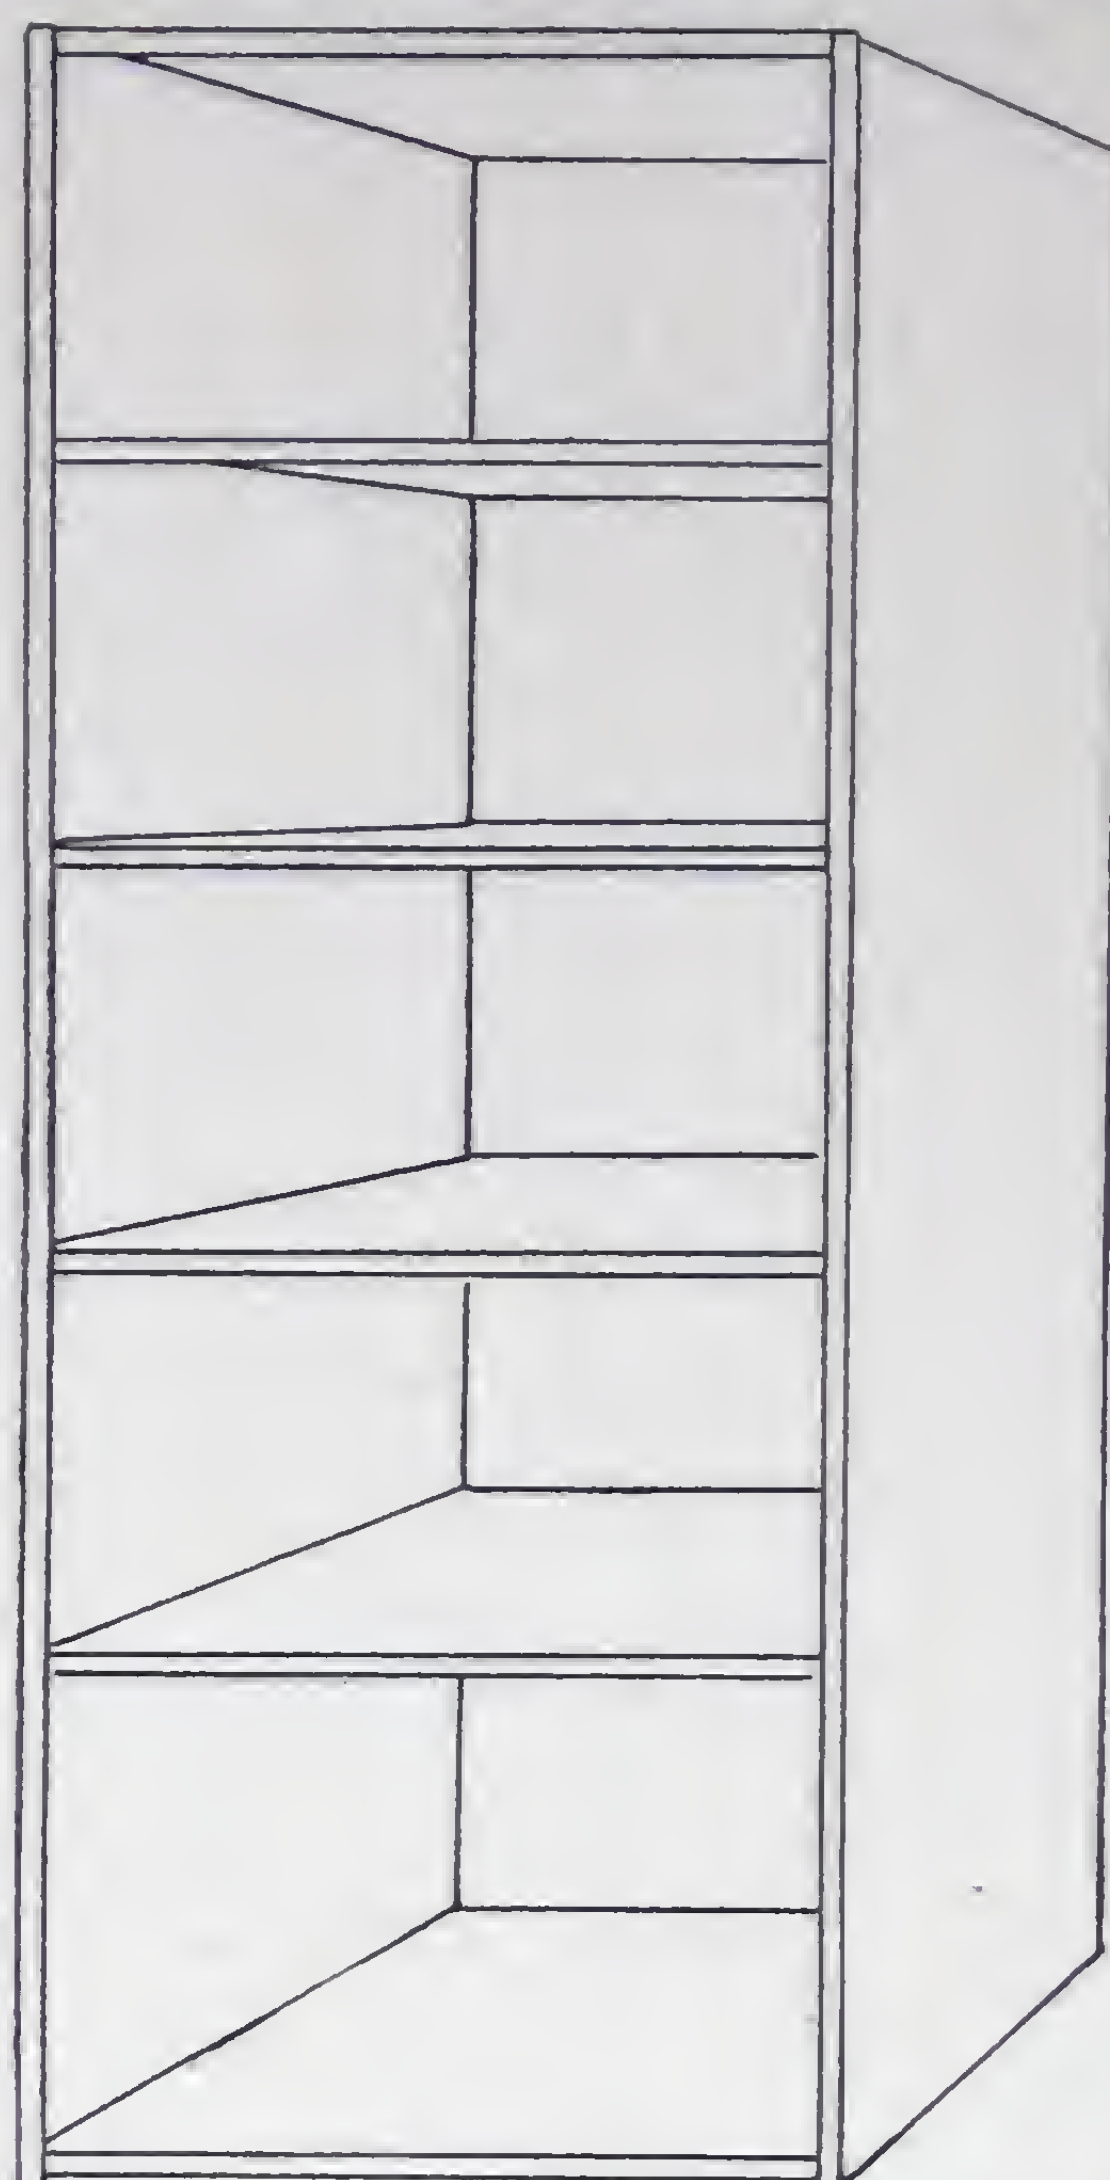

THE wholesaler whose quantities are large, particularly if of hardware or heavy merchandise, finds Lupton Bin Type Shelving, with or without counter extension, ideally suited to his needs. Appearance is not sacrificed to secure strength.

SECTIONS 24" WIDE

These are "filler" sections used in connection with regular 36" sections to fill an exact space. Price is same as 36" section and shipment will be made from factory.

IN ORDERING, specify Catalog Number of each section wanted.

LUPTON RACK TYPE SHELVING

Strength without bulkiness—the secret of Lupton weight-carrying capacity

THIS type of Lupton Steel Shelving is furnished without sides or backs and is intended for use where conditions call for access to all sides of the shelving or where the material to be stored is such that it may extend into the adjacent sections.

Rack type shelving consists of skeleton uprights with plain shelves and necessary bracing. The upright or post is a T-bar, only 1" wide, hot rolled from medium carbon steel and punched on 1½" centers for attaching shelves. The shelves as shown below, have the front and back edges formed tightly and permanently over a specially rolled channel reinforcement. This makes the channel an integral part of the shelf, and prevents slippage or loosening of the shelf from its reinforcement. The channel being carried around the corner of the shelf as an "L" permits a strong joint between the reinforced shelf and the uprights.

Ends of shelves are flanged down and back for additional strength.

Cross-bracing prevents swaying. It may be attached at the most convenient point.

The same scientific column and girder construction is built into Lupton Rack Type Shelving as in Bin Type Shelving, combining great strength with economy of steel and space.

Fig. 11

View from below showing how reinforced shelf is attached front and rear to T Upright.

Fig. 12

An assembly of Lupton Rack Type Shelving (shown above) consists of one *Starting Section* and as many *Additional Sections* as are desired, the *Additional Sections* being the same as the *Starting Section* except for the omission of two uprights.

Rack Type Shelving Sections are shipped knocked down with necessary bolts and nuts for erection. We furnish illustrated and easily followed directions for this simple operation. Finish is baked green enamel.

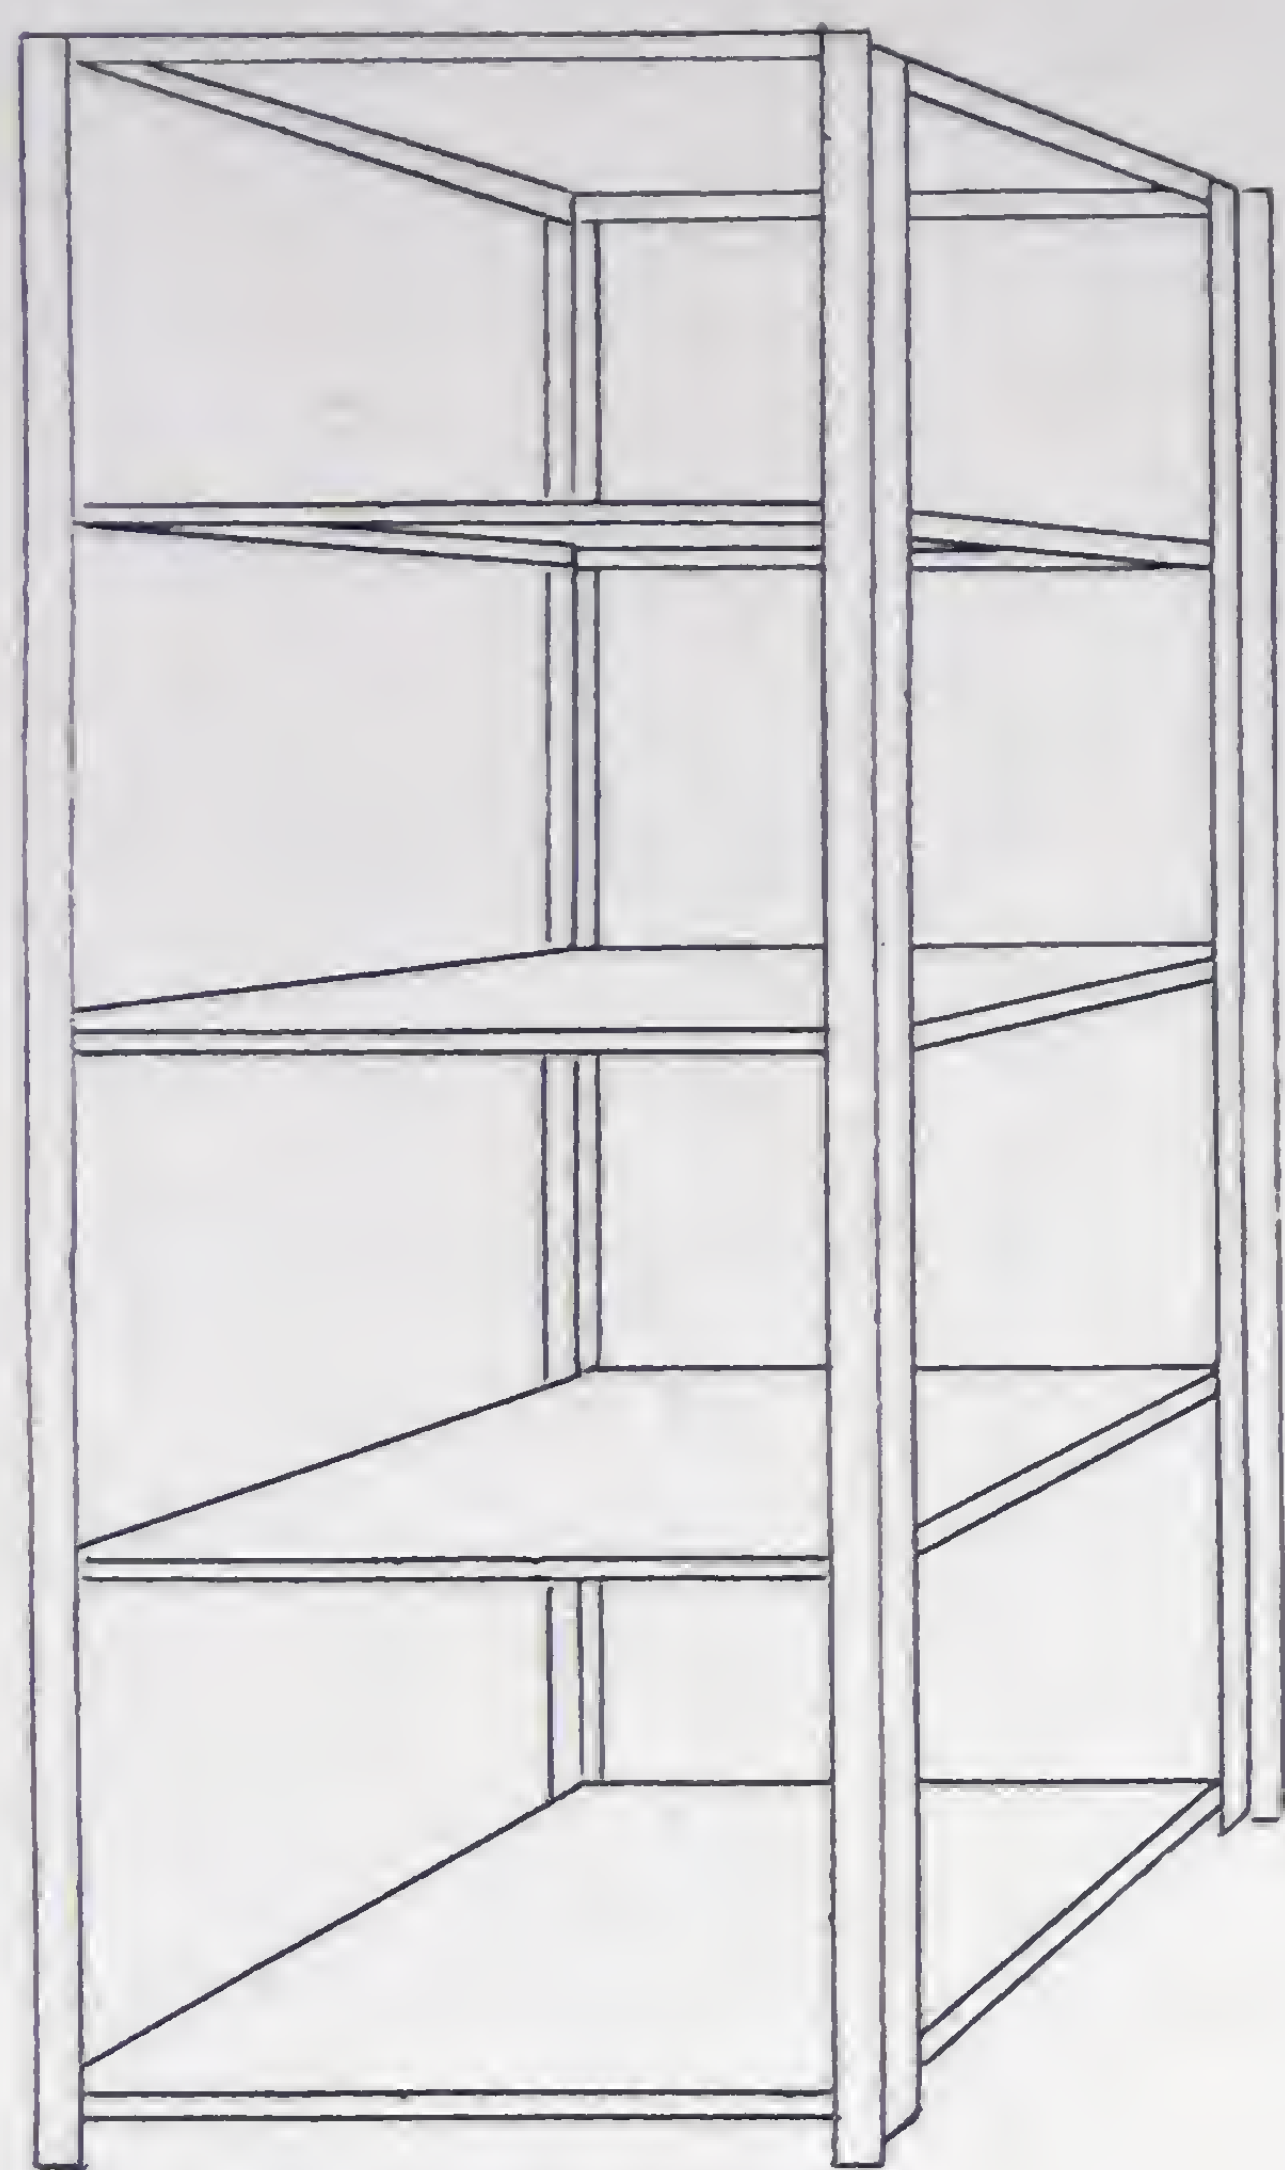

Standard Sizes

Rack Type Sections are 8' high, 24" deep and 3', 4' or 5' wide. (Inside width 35", 47" and 59".)

Shelves are 1" in thickness at front and may be placed as desired on 1½" centers.

Safe load for shelf 36" width 1,000 pounds; for 48" width 450 pounds; for 60" width 350 pounds.

LUPTON UNIT TYPE SHELVING

*for the stock consisting of many
small items—a place for everything*

THESE Units, which are shipped *set up and ready to use*, consist of individual cabinets each 3 ft. wide, 1 ft. deep and 7 ft. high. As shown in Unit No. 220, as many as 162 separate and individually indexed bins may be easily contained in only three square feet of floor space.

Upright fronts and divider fronts are tubular to avoid sharp edges. Bin front and label holder are integral with shelf and the shelf itself is reversible, if plain shelves rather than bins are wanted.

Shelves may be placed as desired on $1\frac{1}{2}$ in. centers vertically and are punched for 2 in. horizontal adjustment of dividers. The finish is two coats of velvet green enamel, sprayed on and baked.

These Units provide a very compact storage system with each item in its own labeled compartment and yet accessible and visible. Inventory is quick and accurate. Shortage and overages are less likely. Orders may be made up from them and incoming stock distributed into them in one-half the time usually required. Requisitions are assembled rapidly and correctly. There is no room for disorderliness in a Lupton steel unit.

Any unit except No. 150 (see page 20) will carry any load of metal parts that may be placed in it. Unit No. 230 is similar in dimensions to No. 150, except that it has reinforced shelves which will carry three times as heavy a distributed load as Unit No. 150. Units may be moved to another location without disturbing the contents, if necessary.

Sixteen varied arrangements of shelves and dividers give a wide field to choose from and fit practically any need. With its many arrangements and the fact that it requires no assembly, Lupton Unit Shelving is a popular type of steel shelving for almost any purpose.

*Protects your goods, saves floor space
and promotes economy*

In the event that Units are to be put to other uses than were first intended, the shelves and dividers can be relocated by taking out a few bolts. A wrench and screw driver are the only tools needed. Additional shelves and dividers are easily procurable, if desired, to increase capacity of Units.

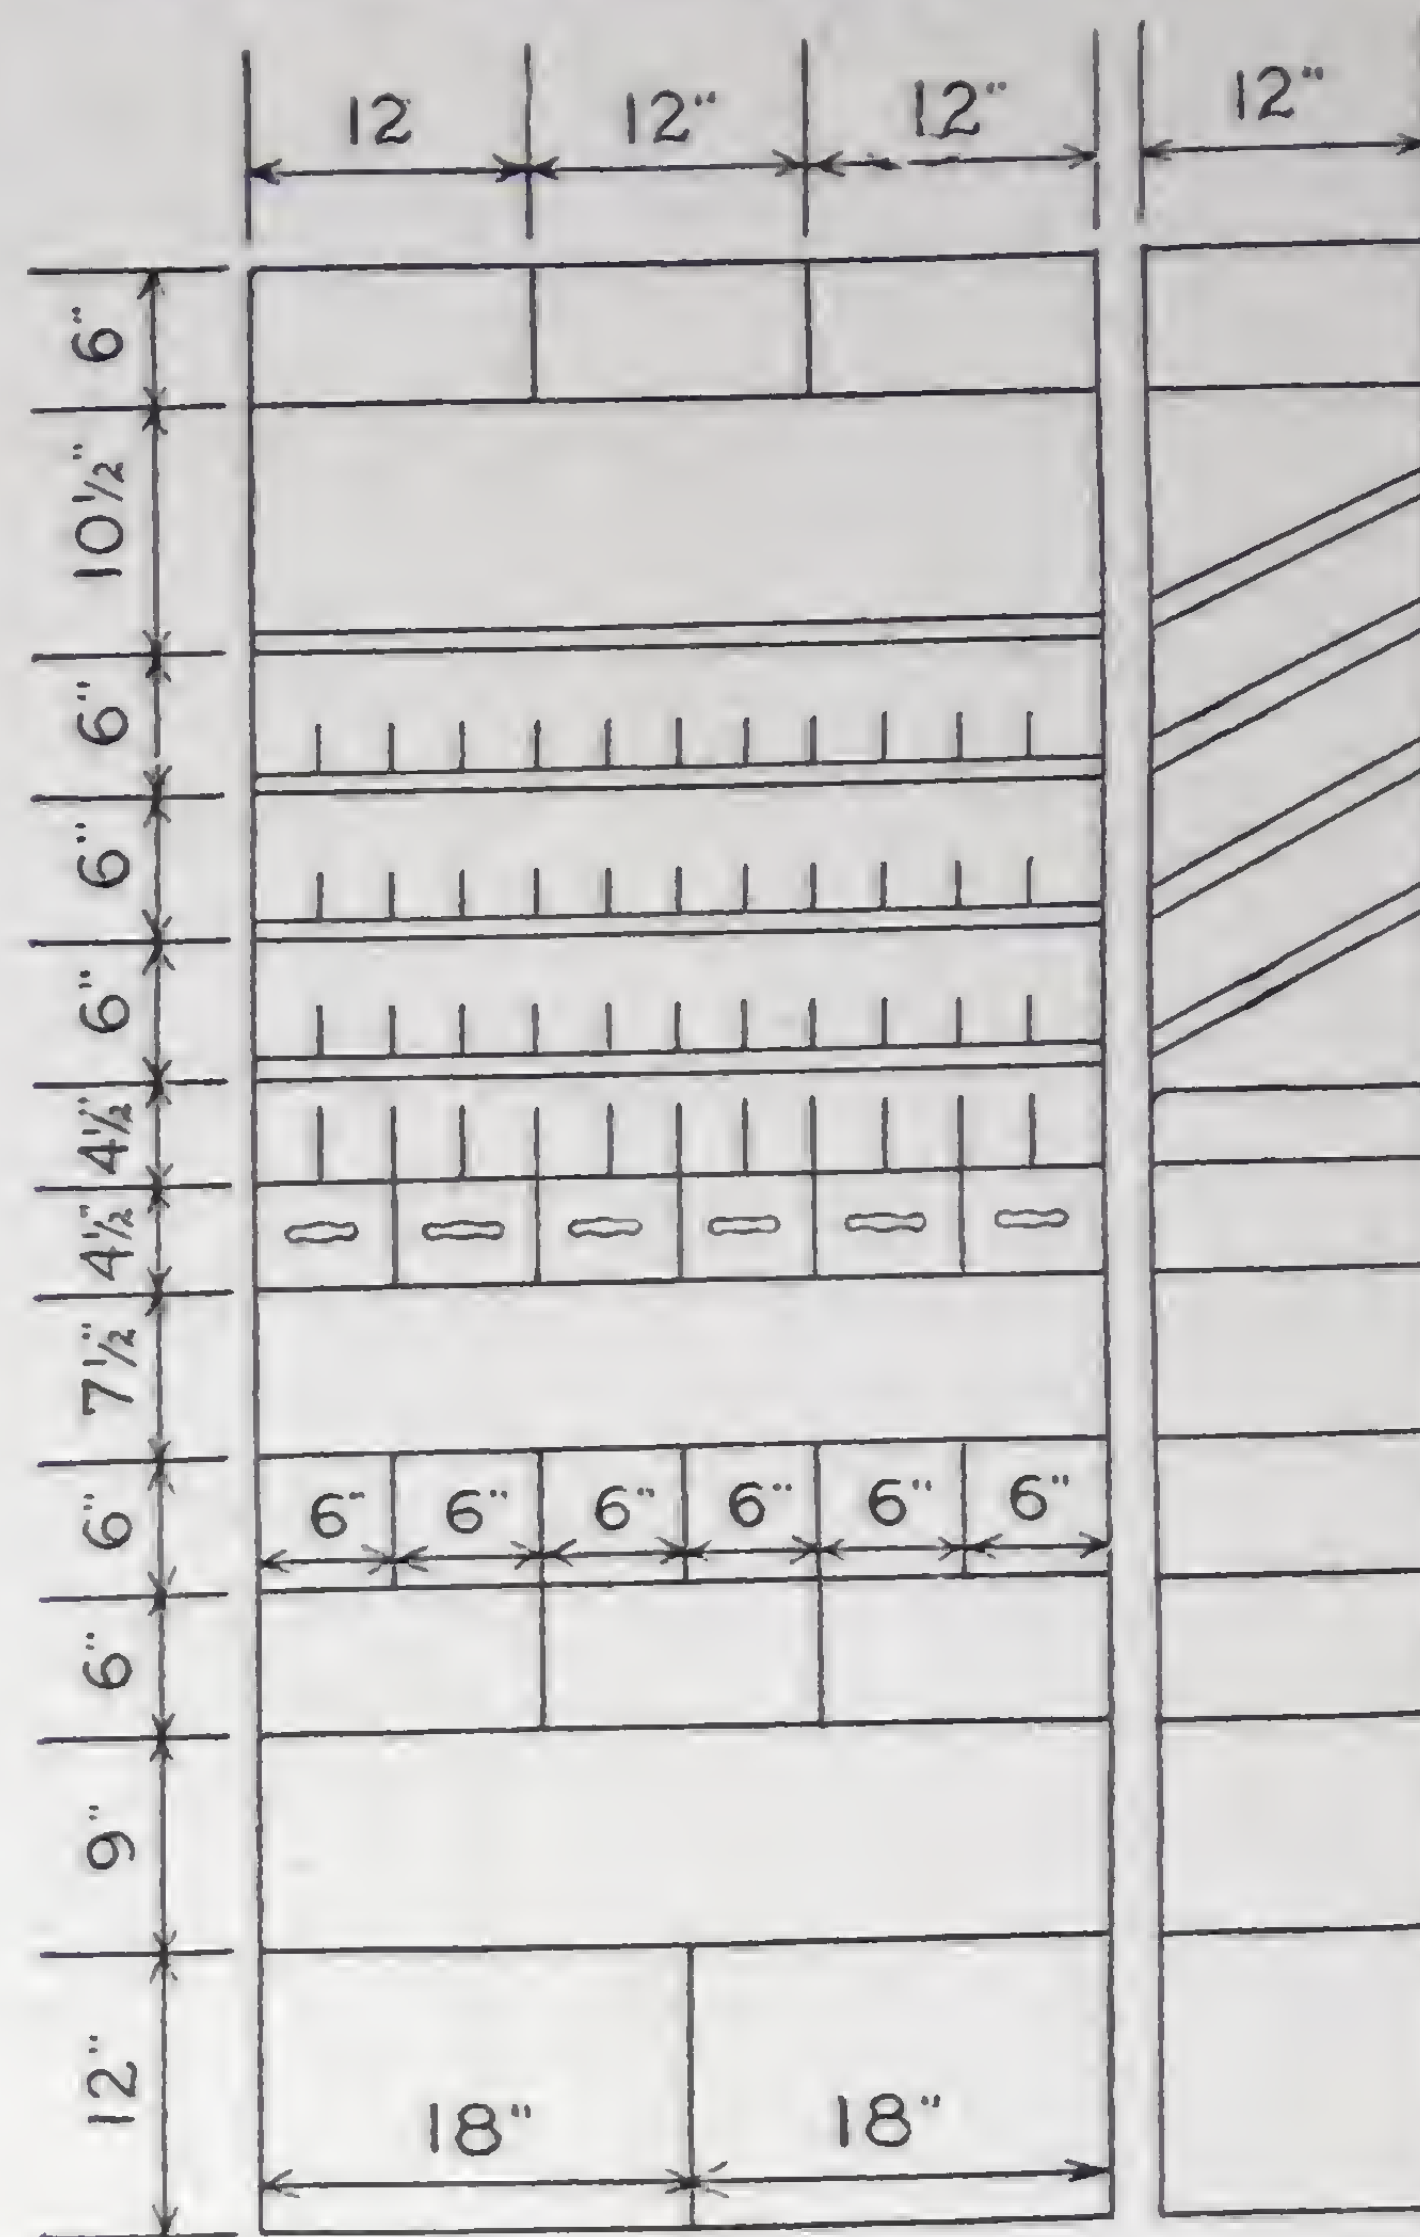

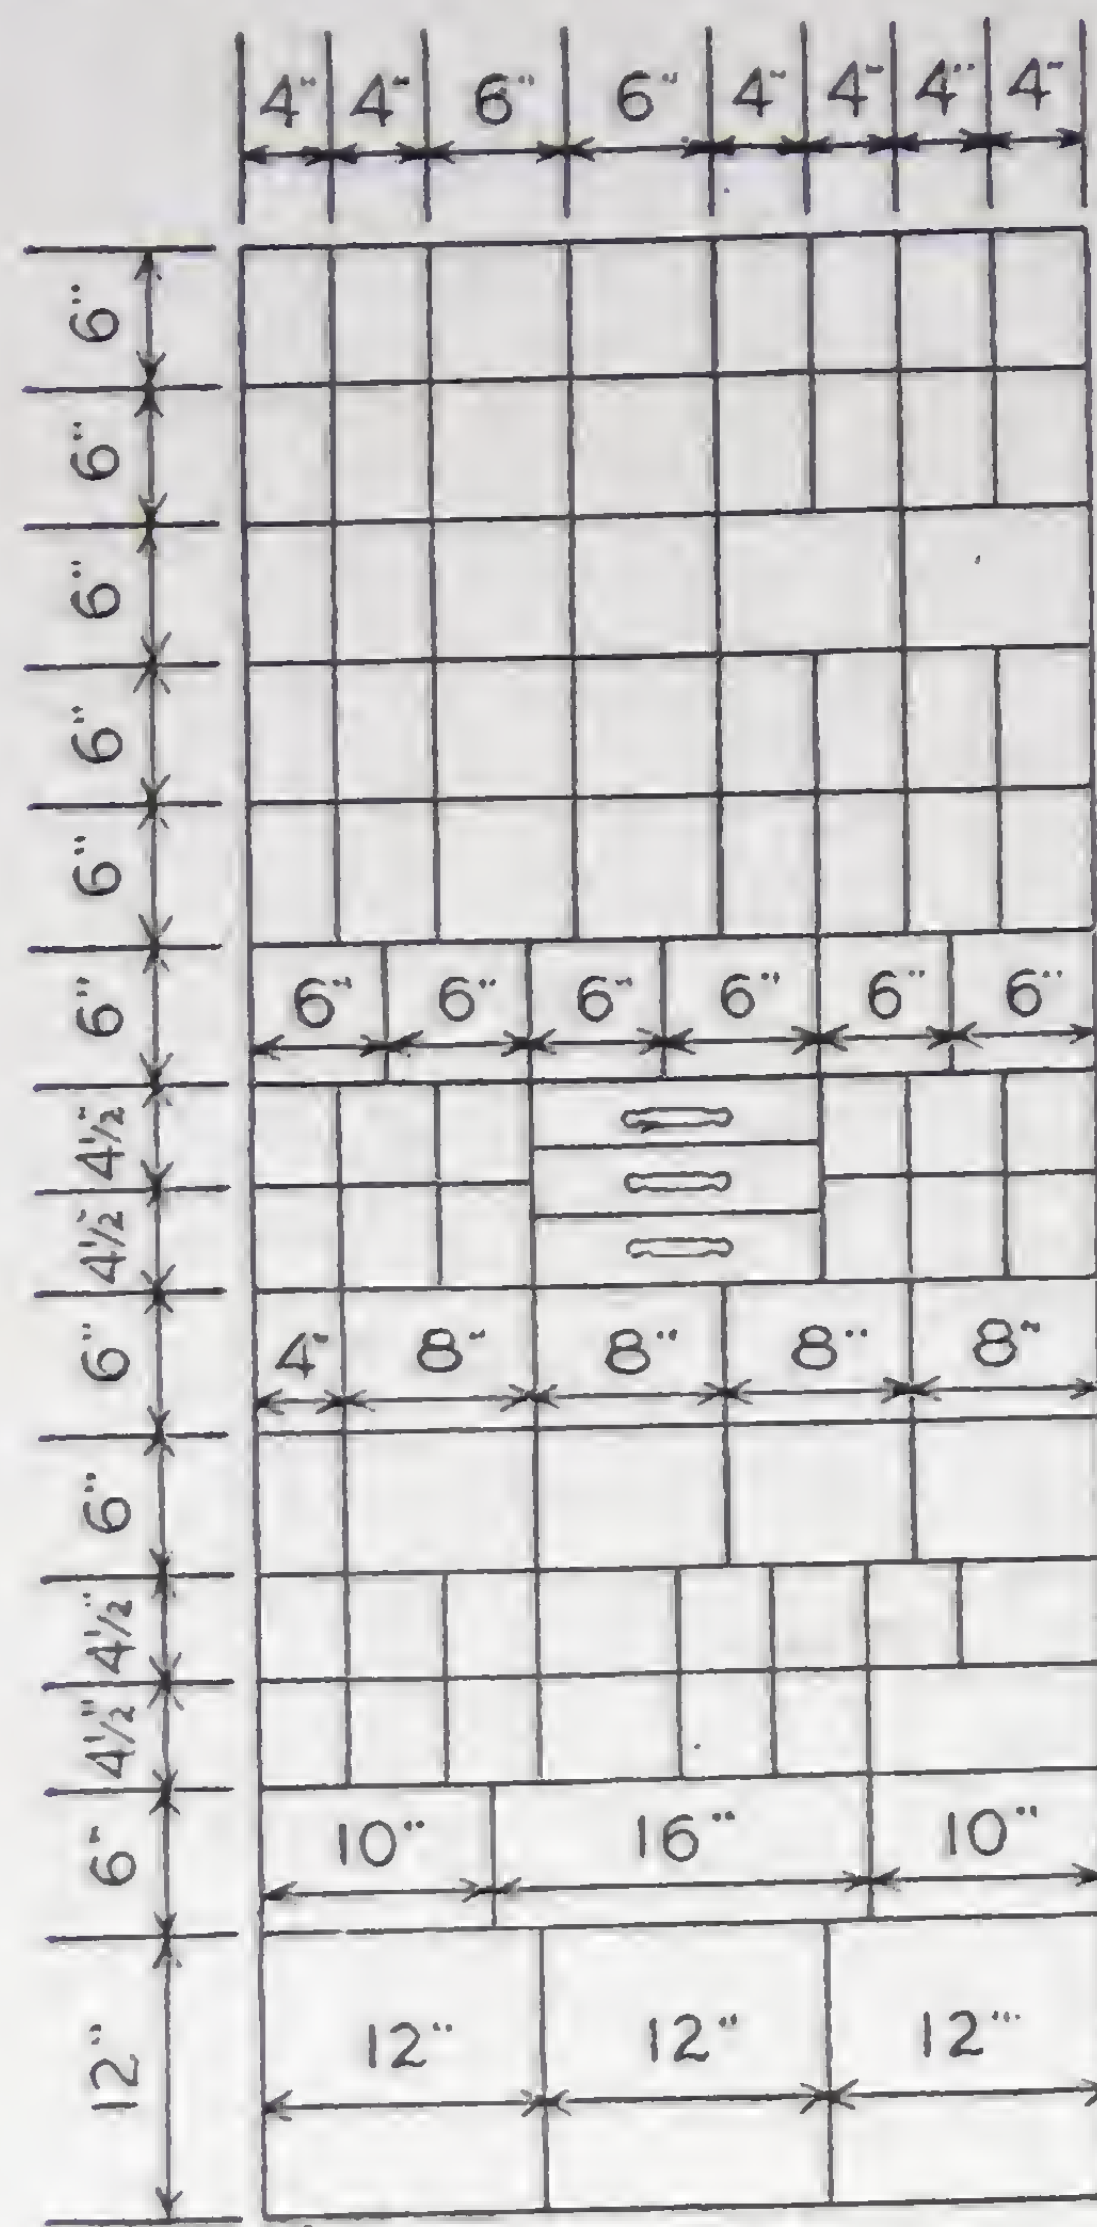

The output of Lupton Units, which has run into many thousands, has enabled us to reduce the price to a point that is actually less than that of wooden bins. If you have a stock of anything that is cranky to classify and store, whether it be printed matter, machine parts, fittings or bolts and nuts—in fact anything that consists of a great many small items—Lupton Units will save their initial cost in a few months.

UNIT TYPE SHELVING

Unit No. 710
Price \$54.00

For Pipe Fittings: A steel unit ready to use, for the systematic storage of 6500 fittings. Iron pipe sizes $\frac{3}{8}$ " to 1". Contains 123 individually indexed compartments. Shipping weight 245 lbs.

Unit No. 720
Price \$48.00

For Small Tools: Contains 60 compartments 3" wide (48 of them sloping) and 6 drawers $4\frac{1}{2}$ " x 6" x 12". Total 148 compartments each separately indexed.

Shipping weight 240 lbs.

Lupton Counter Cabinet

Each drawer is 12 x 12 x $2\frac{1}{4}$ " and contains 12 compartments 4" x 3". Convenient for small bolts, nuts, washers, etc. Makes a neat appearance on the counter. Cat. No. 530. Price \$7.00. Shipping weight 19 lbs.

UNIT SHELVING IN USE

SMALL items in a hardware stock classified and indexed in Lupton Unit Shelving. The man whose floor space is limited will find Lupton Units a great convenience.

This arrangement shows two units No. 160 each containing 108 compartments, and 1 unit No. 110 containing 60 compartments. Interchangeable units match up with admirable precision.

PPIPE fittings carried in Lupton Units compactly and neatly. The steamfitter whose stock room is shown here has a delivery truck equipped with Lupton Units and saves much time on rush jobs. Lupton Shelving Units carry this heavy stock without flinching. Seven sections are shown in this installation, and order and accessibility are plainly evident.

PPIPE fittings and plumbing accessories carried for resale. Note the visibility and orderliness of this stock—several hundred items in 9 sq. ft.

A unit of plain shelves and two bin units are shown. The section on the right has a convenient nest of three drawers; bins of various sizes carry the stock most conveniently.

LUPTON DISPLAY TYPE SHELVING

for the Retail Store

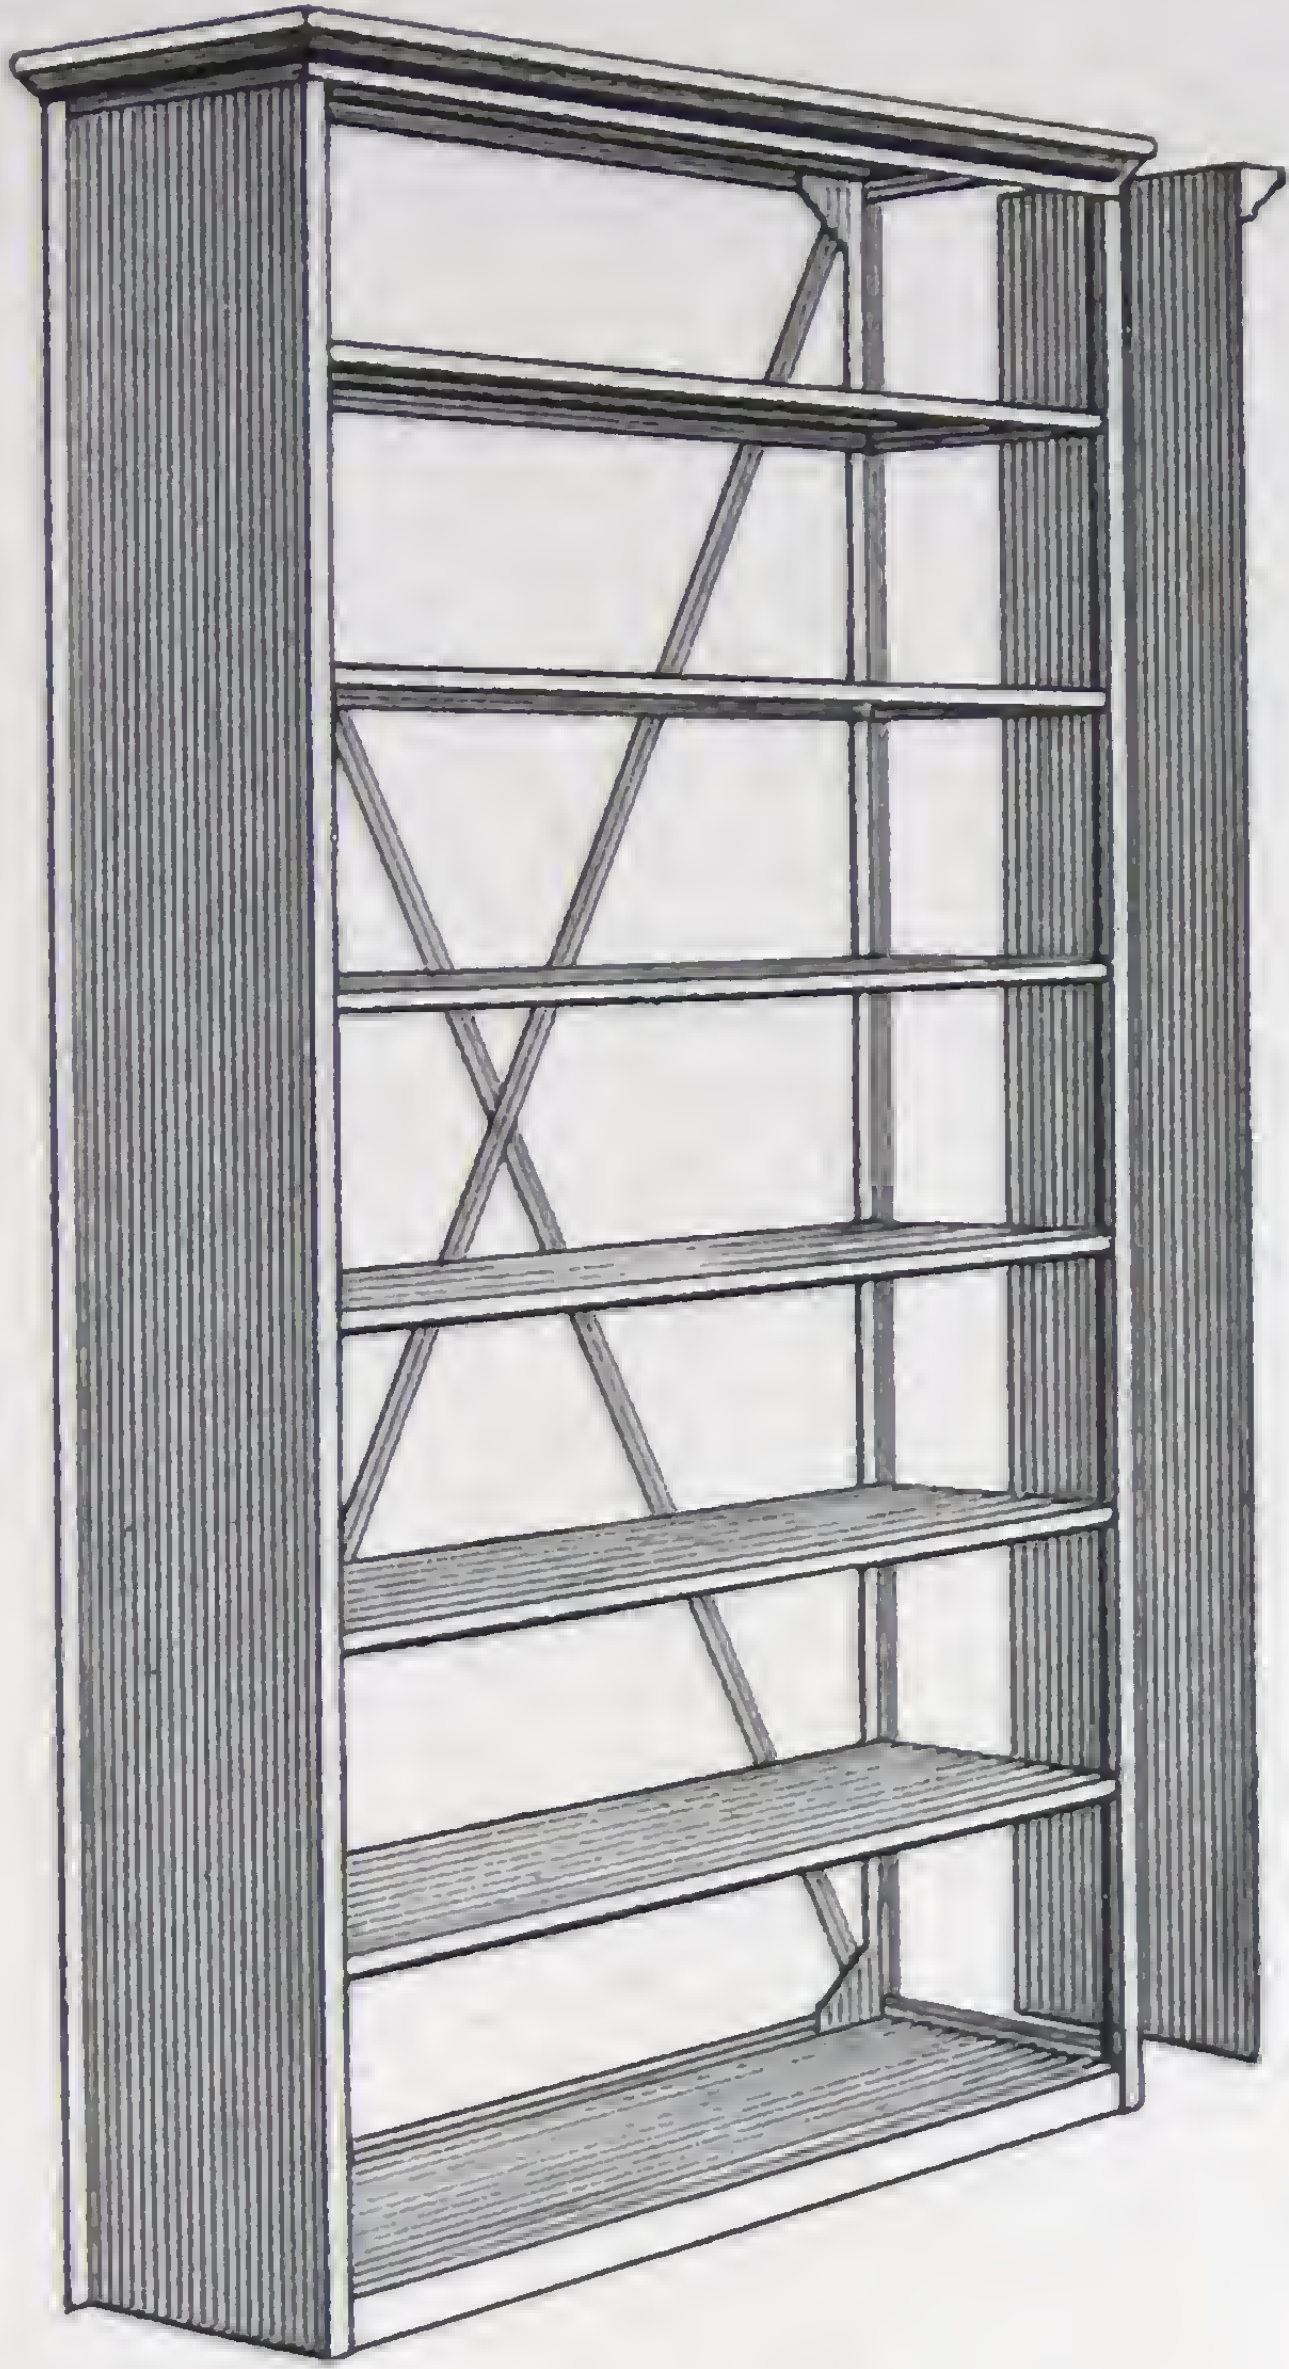

Fig. 12

Starting section. Solid ends shown are optional and are not included in the price of the section

The finish is a velvet-green enamel. It gives an air of dignity and its soft tone emphasizes the color and variety of the goods on the shelf most effectively.

Starting Sections of Display Shelving are furnished with two End Panels or solid sheets with End Moldings as shown in Fig. 12. Attached at each end of an assembly of whatever length, these panels give the requisite finish necessary to Display Shelving.

Total over-all length will be $36\frac{1}{8}$ " (or $24\frac{1}{8}$ ") times the number of Sections used, plus $1\frac{1}{4}$ " for each end molding used. Standard height is 7 ft. including solid base 4". Standard widths 3 ft. and 2 ft. Depth 12". Shelves may be adjusted on $1\frac{1}{2}$ " centers vertically.

Each shelf will carry 300-lb. load evenly distributed.

Two-foot sections are used as fillers to adjust the over-all length. This type of shelving is intended in all cases to be anchored to the wall, holes being punched in triangular plates at the top for lag screws.

MODERN efficiency in classification and display of goods—quick handling, rapid turnover and the reduction of dead stock—are all accomplished for the retail dealer by Lupton Display Shelving.

It's the chain store idea, made available at moderate cost to every retail store using open shelving.

You can set it up, take it down, raise or lower the shelves, put in more shelves or take out some, with nothing more than a wrench or a screwdriver. And if your business is growing the fact that you can adjust your shelving or even dismantle and move it to a new location is worth a lot.

This is the ideal type of shelving where display is to be featured. Light, but strong, trim and good to look at, Lupton Display Shelving enhances the appearance of any retail store where it is used. With shelves 12 inches deep, there's no chance for slow moving articles to be hidden and material at the back can be easily reached.

Fig. 13

Starting section, open ends, and Additional section. End Moldings are furnished only with Starting Sections. End Braces and Back Braces, required only for every fourth Section, are extra.

DISPLAY SHELVING IN USE

LUPTON Display Shelving in a hardware and house furnishing store. This type of shelving carries any reasonable load, forms an attractive background for the merchandise which it displays, and practically eliminates maintenance cost.

PHILADELPHIA Paint and Glass Company, Philadelphia. Here Lupton Display Shelving is fully loaded with cans of paint and varnishes. The shelves are adjustable to suit the various heights of the cans. Lupton Steel Store Equipment can be purchased as the business grows and may be uniformly expanded whenever necessary.

LUPTON DISPLAY COUNTER

*—this Display Counter really shows the goods!
—and its working top really works!*

ALL steel and plate glass; top surface of battleship linoleum — neat, efficient and practically indestructible. An occasional waxing keeps the linoleum always fresh. The slender lines of the steel construction, with the rich olive green baked enamel finish and solid brass edging make it suitable for use in any store. When Lupton Display Shelving — of the same velvet-green

Note the neat appearance and good display of this hardware stock in Lupton Showcase and Shelving

*Lupton Steel Counter in chain store of Great Atlantic and Pacific Tea Co., New York City.
Lupton Display Shelving in background*

finish and similar trim lines—stands behind the counter, the effect is attractive and has real merchandising value.

The top won't break like glass, nor dent and splinter like wood. Roll holders for wrapping paper are readily bolted on. The front and ends may be steel plates, instead of glass if storage rather than display is wanted.

Lupton Display Counters are made up in 3-foot sections, with "inside" and "outside" corners as desired. They are shipped knocked down, each unit being crated individually. Clear and simple instructions for erection are furnished with each shipment.

LUPTON DISPLAY COUNTER

Details of construction

TOP: Heavy battleship linoleum cut to fit entire straight run of counter, no matter how many straight units are used. No crosswise joints on the top (except where corner units are used). Easily kept in shape by an occasional waxing.

MOLDING: The green linoleum top is kept in place and effectively set off by a solid brass molding, highly polished.

STANDARDS (Posts): Narrow rolled steel T's, 1" wide do not obstruct display—they enhance it.

DISPLAY SHELVES: There are two of these below the counter, as shown. The bottom shelf is 6" from the floor providing a space for cleaning underneath and to permit circulation of heat. The middle shelf is halfway between the counter and bottom shelf.

STEEL OR GLASS ENDS: When the end

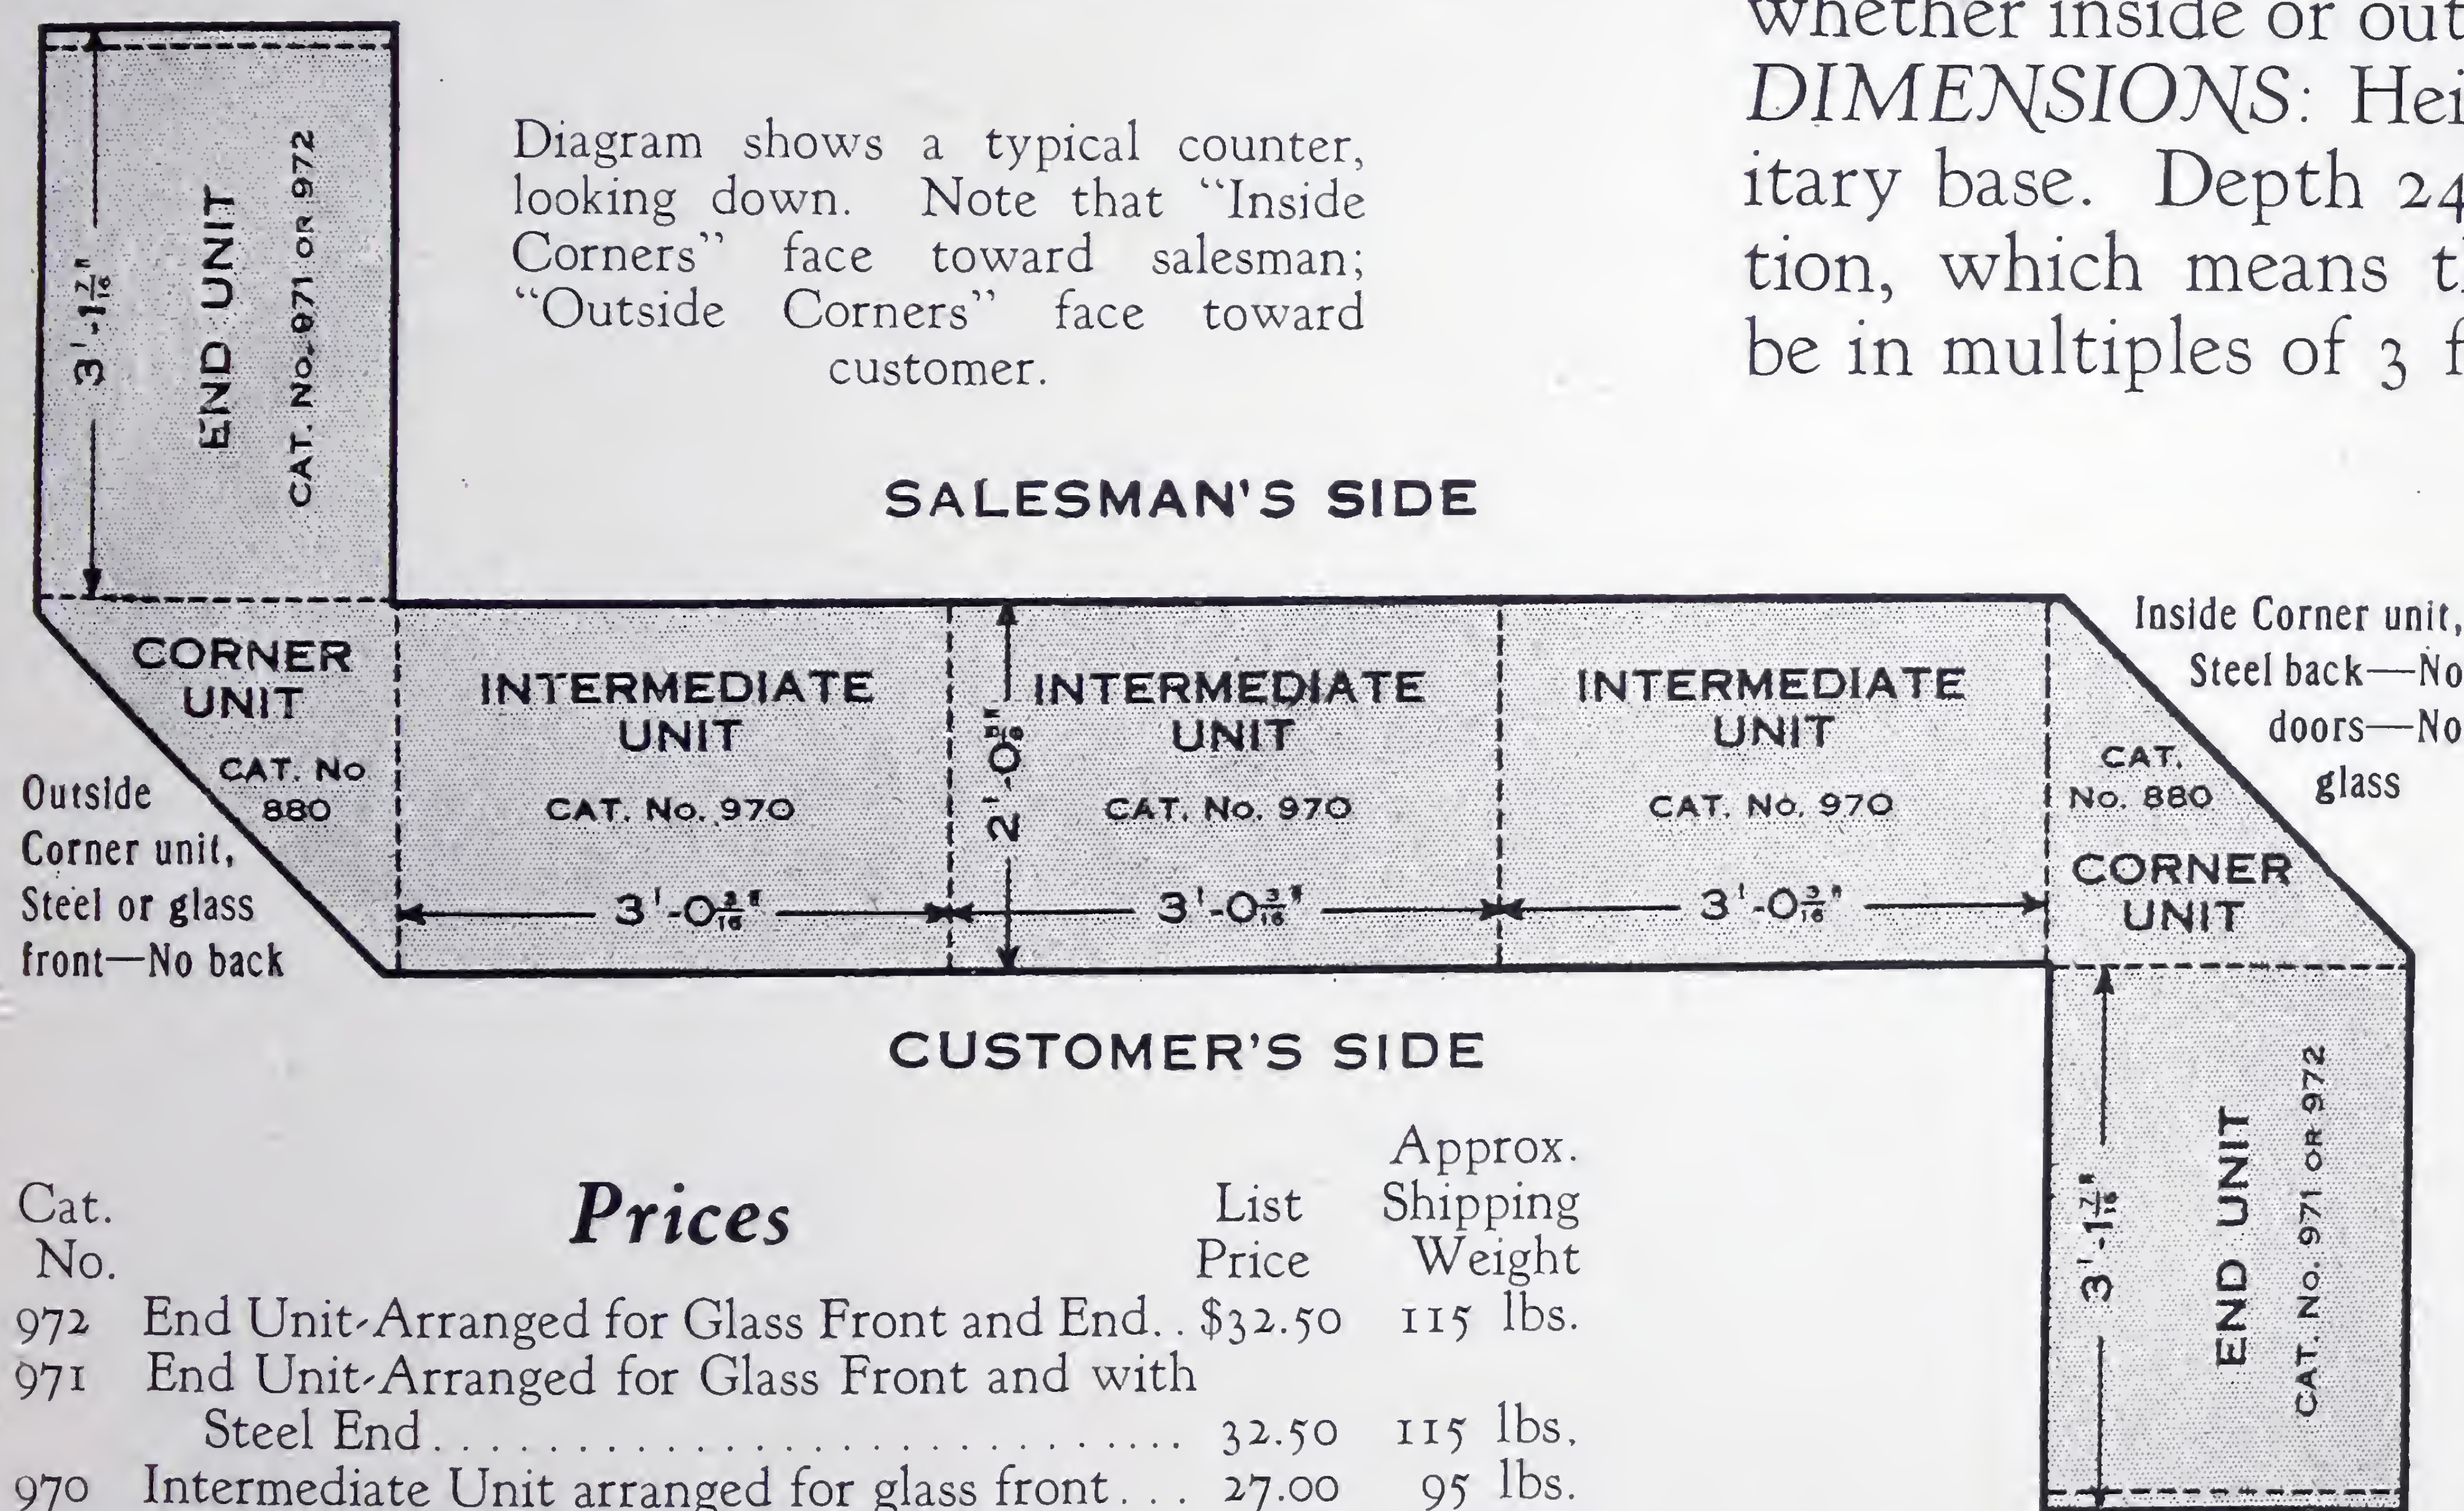

of the counter offers display, provision is made for glass. A solid steel end may be had without additional cost. *Unless otherwise specified, ends are arranged for glass.*

OPTIONAL STEEL FRONTS: If desired to build an enclosed counter, steel fronts can be supplied at an additional cost. Both glass and steel front units may be combined in one counter when desired.

REAR DOORS: Sliding steel doors with an enamel finish or nickel-lined can be furnished at slight extra cost. These are of the solid type, arranged in pairs, and fitted with stops and rubber bumpers.

CORNER SECTIONS: These are used to build a 90° L and are known as inside and outside corner sections. Diagram illustrates the difference. In ordering please specify plainly whether inside or outside corners are wanted.

DIMENSIONS: Height 40" including 6" sanitary base. Depth 24". Length 3 ft. per section, which means that over-all length will be in multiples of 3 ft. (See Diagram.)

Instructions For Ordering

Each unit shown in the price list contains the top, bottom and center intermediate shelves, uprights, glass supports, linoleum (cut the length of the entire run) brass molding and joint covers.

Steel fronts, doors, glass for fronts or ends, steel

partitions, and steel backs for inside corner units are not included in the unit price.

If steel ends are desired, be sure to specify them on the order. If no ends are specified, the counter will be shipped with the necessary provision for glass ends.

To prevent mistakes, particularly when corner units are included, send a rough sketch of layout indicating salesman's and customer's sides. Each installation (except a 3-foot section No. 977), must contain two end units.

Cat. No.	Prices	List Price	Approx. Shipping Weight
972	End Unit-Arranged for Glass Front and End.	\$32.50	115 lbs.
971	End Unit-Arranged for Glass Front and with Steel End.	32.50	115 lbs.
970	Intermediate Unit arranged for glass front.	27.00	95 lbs.
789	Steel Doors (including runways) per pair.	8.20	25 lbs.
792	Nickel Lined Doors (including runways) per pair.	13.60	32 lbs.
790	Door Stops—state number of pair required.	Included above	
880	Corner Units.	27.00	95 lbs.
791	Steel Fronts—For End or Intermediate Units.	4.00	18 lbs.
883	Steel Fronts—For Corner Units.	4.00	18 lbs.
785	Steel Partitions—For use between Units.	2.00	11 lbs.
977*	Single Unit-Arranged for Glass Front and Glass or steel ends.	38.00	130 lbs.

*This unit (No. 977) is a complete 3 ft. counter and cannot be used with other units.

NOTE: Glass prices are omitted owing to the wide variations for different localities and frequent changes. You can save freight charges, packing expense and risk of breakage by purchasing locally. Glass is 1/4-inch plate. Size of front glass, 35 3/4 inches by 32 inches. End glass, 19 inches by 32 inches. Outside corner glass, 32 3/16 inches by 32 inches.

LUPTON FACTORY EQUIPMENT

Lupton Bench Leg No. 520

Made from pressed steel with all parts die-formed and welded together. Top and feet are broadly flared, providing stability without cross-bracing. A strong construction for heavy duty.

Height 31" without top. From front to back 23½ in. Extension increases depth 5".

Price \$4.70. Shipping weight 25 lbs.

Extension, Cat. No. 526, \$0.25. Shipping weight 2 lbs.

Lupton Factory Desk

Ruggedly made for hard wear but smoothly finished. Full width drawer with cylinder lock. Top is reinforced and hood contains pen holder on each side. Widely used by Foremen, Timekeepers, Shipping Clerks, etc.

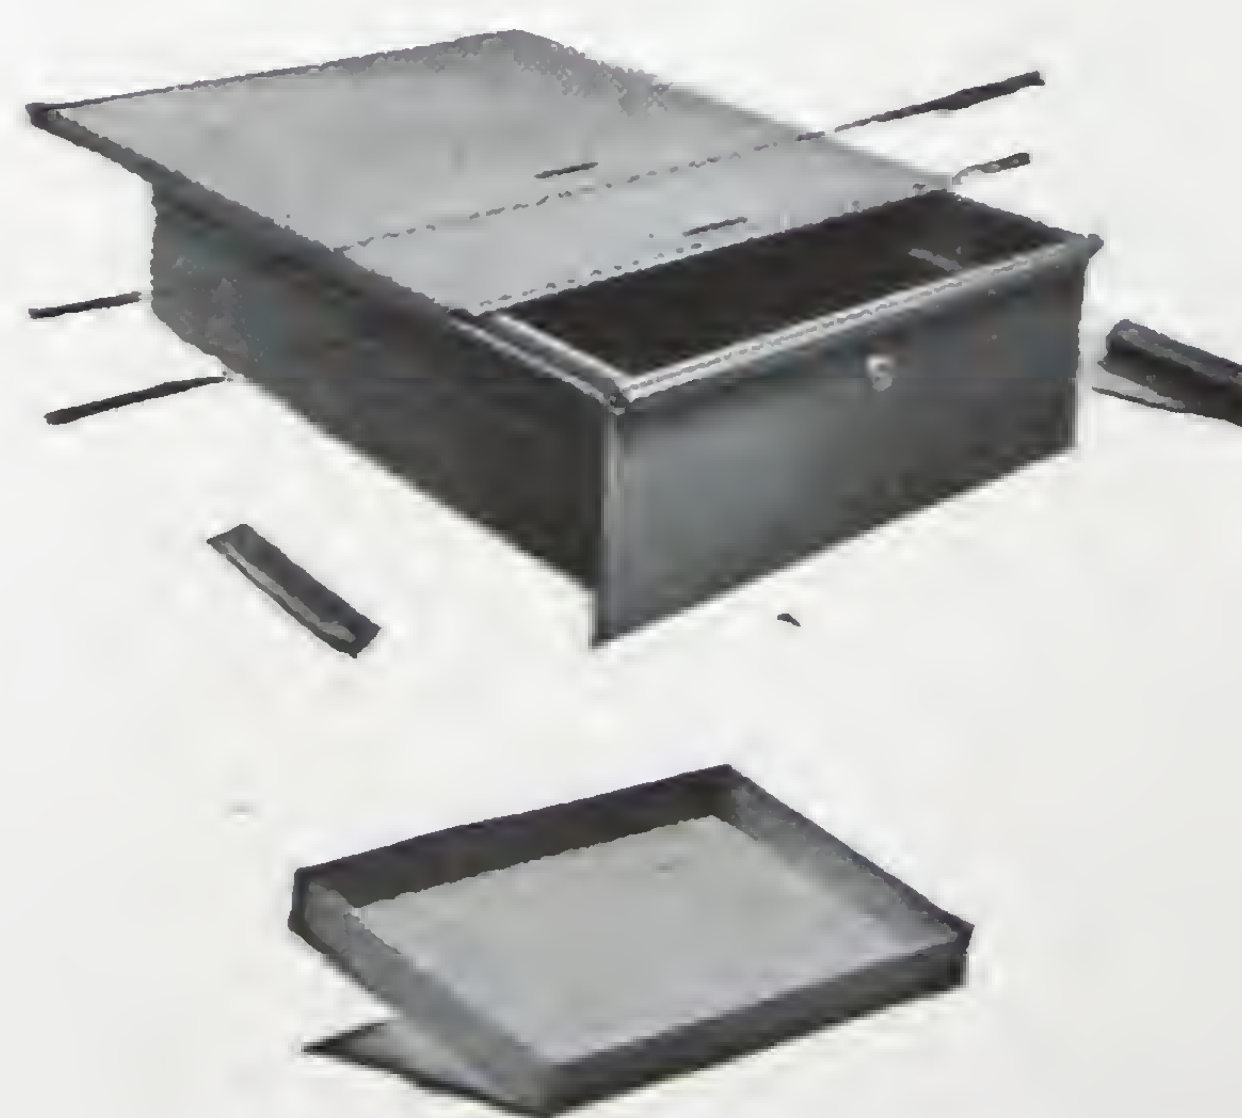

Width 36"; height 43½" at front, 52" at back; depth 28". Finish—high grade baked green enamel.

Cat. No. 499. Price \$38.40. Shipping weight 150 lbs.

Bench Leg No. 525

Made from T-Bars of rolled steel with riveted joints. These bench legs are low in price but high in serviceability being amply rigid and strong for general use. Height 31 inches. Take a top 28 inches deep. Price \$3.50. Shipping weight, 20 lbs.

Bench Drawer and Tray

A substantial steel drawer for tools, blue prints, etc. Easily attached to any bench top. Drawer slides on runners and has stop. Good cylinder lock. Two sizes.

Cat. No.		Price	Ship. wt., lbs.
512	14" x 5" x 18"	\$6.10	15
498	14" x 6" x 24"	7.50	22
519	Tray extra50	2

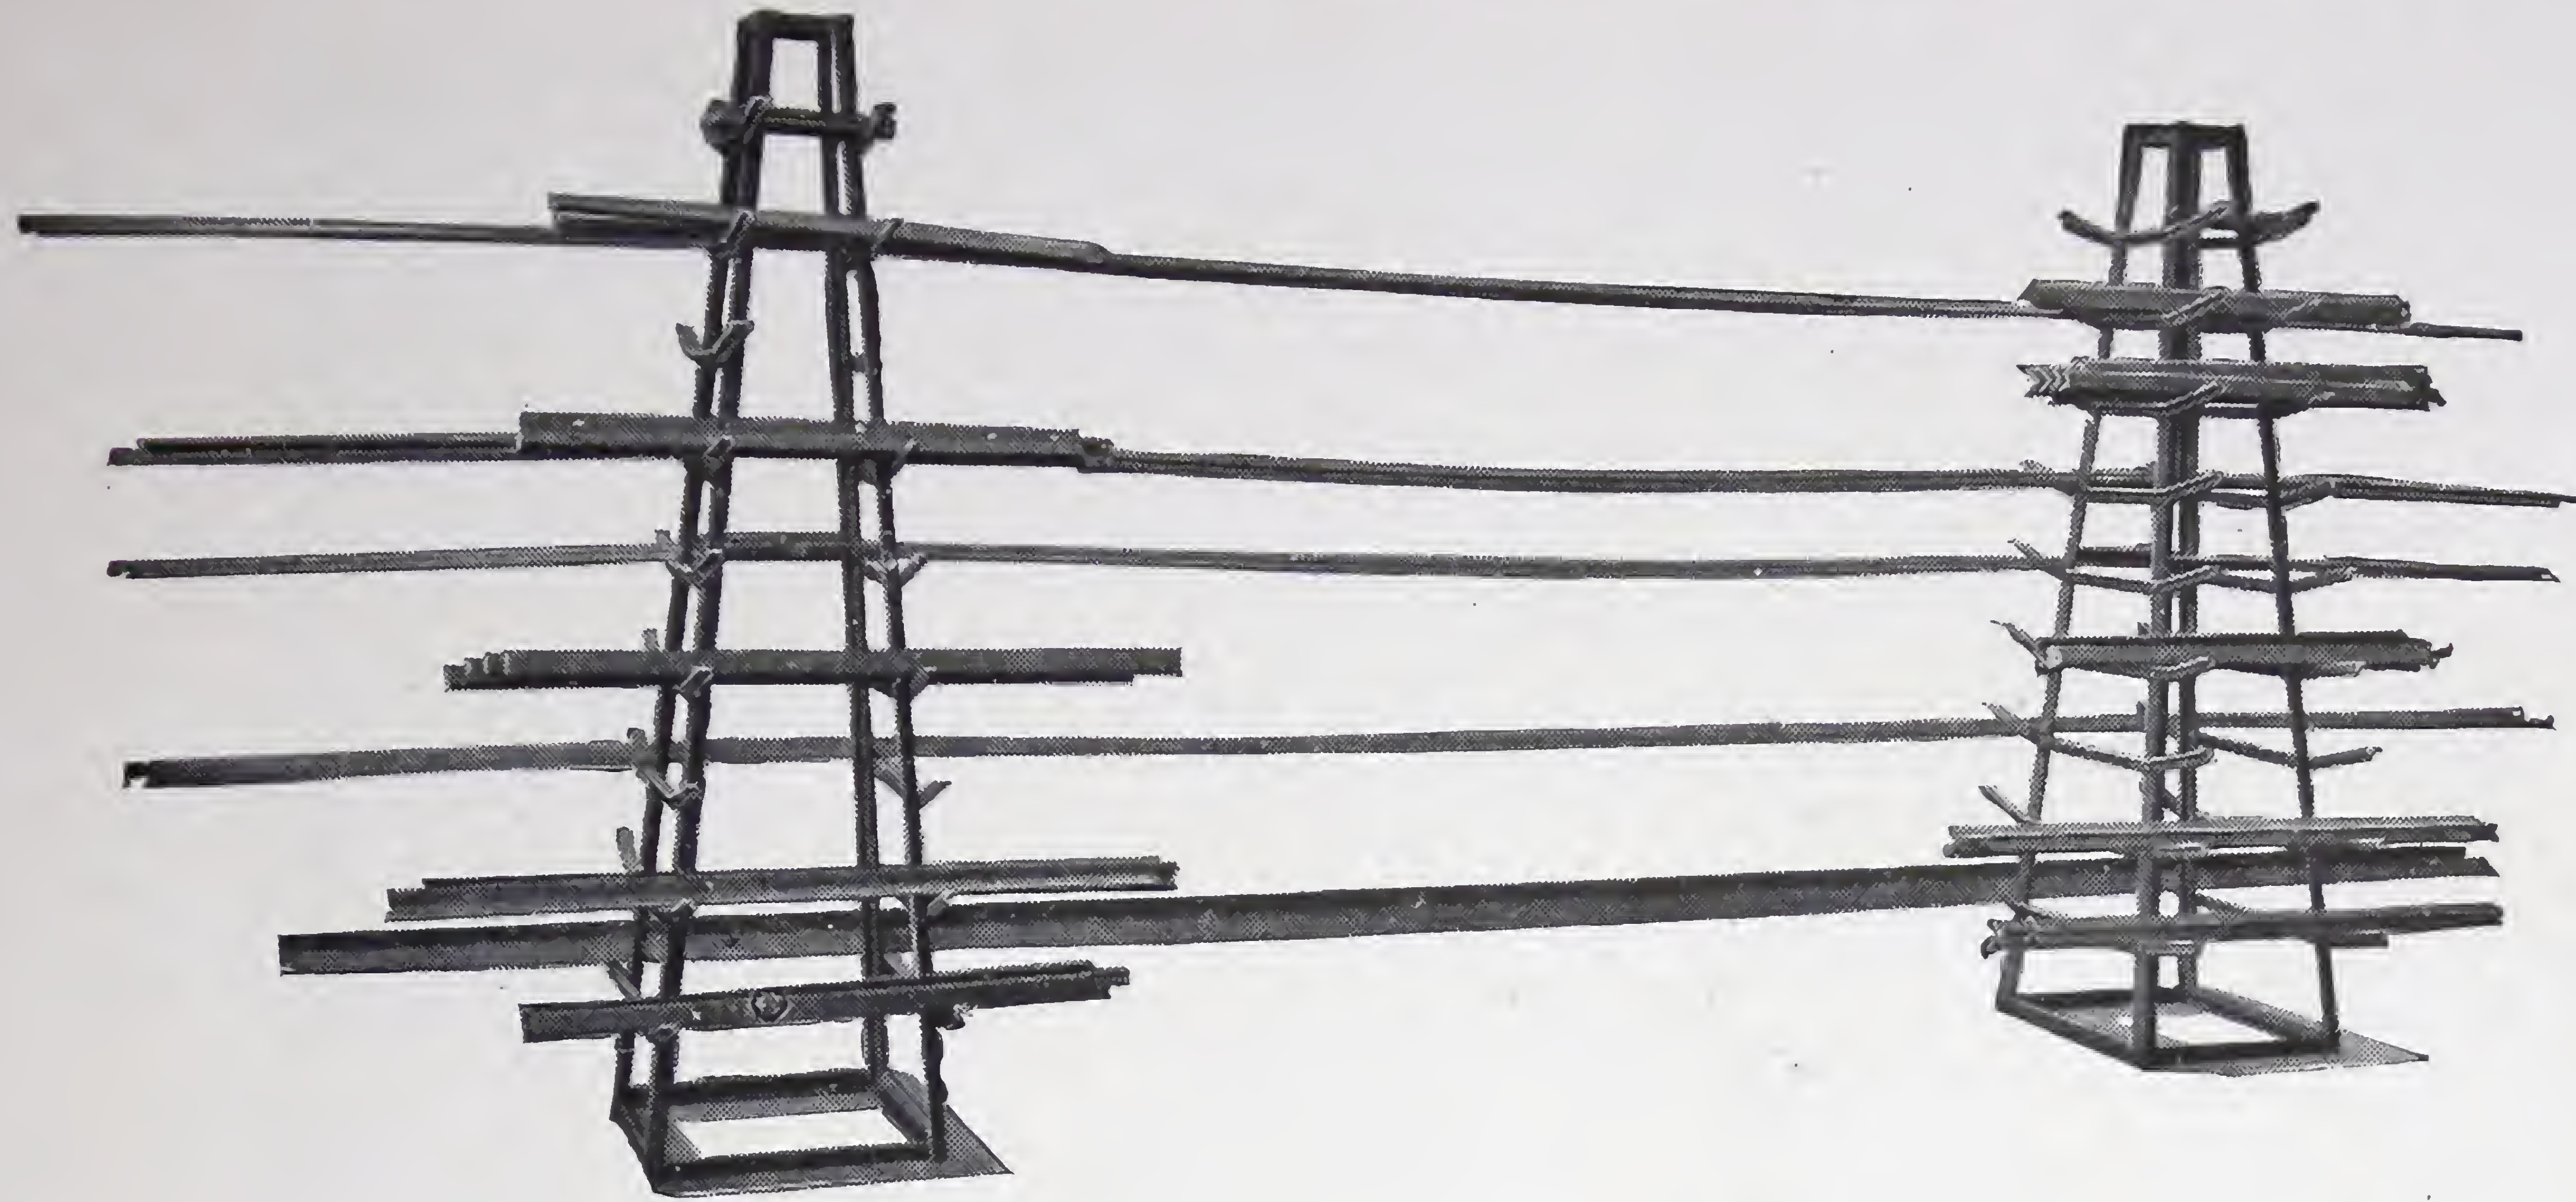

Lupton Tool Cabinet

Provides safety and orderliness for tools, etc. Welded construction. Shipped erected. Shelves are adjustable. Good cylinder lock. Size 36" high, 24" wide, 16" deep.

Cat. No. 496. Price \$25.20. Shipping weight 90 lbs.

LUPTON FACTORY EQUIPMENT

Lupton Pipe and Bar Racks

—for bar metals, shafting, pipe, conduit, etc.

Each rack is a tapering stand with nine pairs of arms projecting 8" on each side. Strong angle-iron construction, riveted and welded. Will carry practically any load that may be placed on it. Easily loaded.

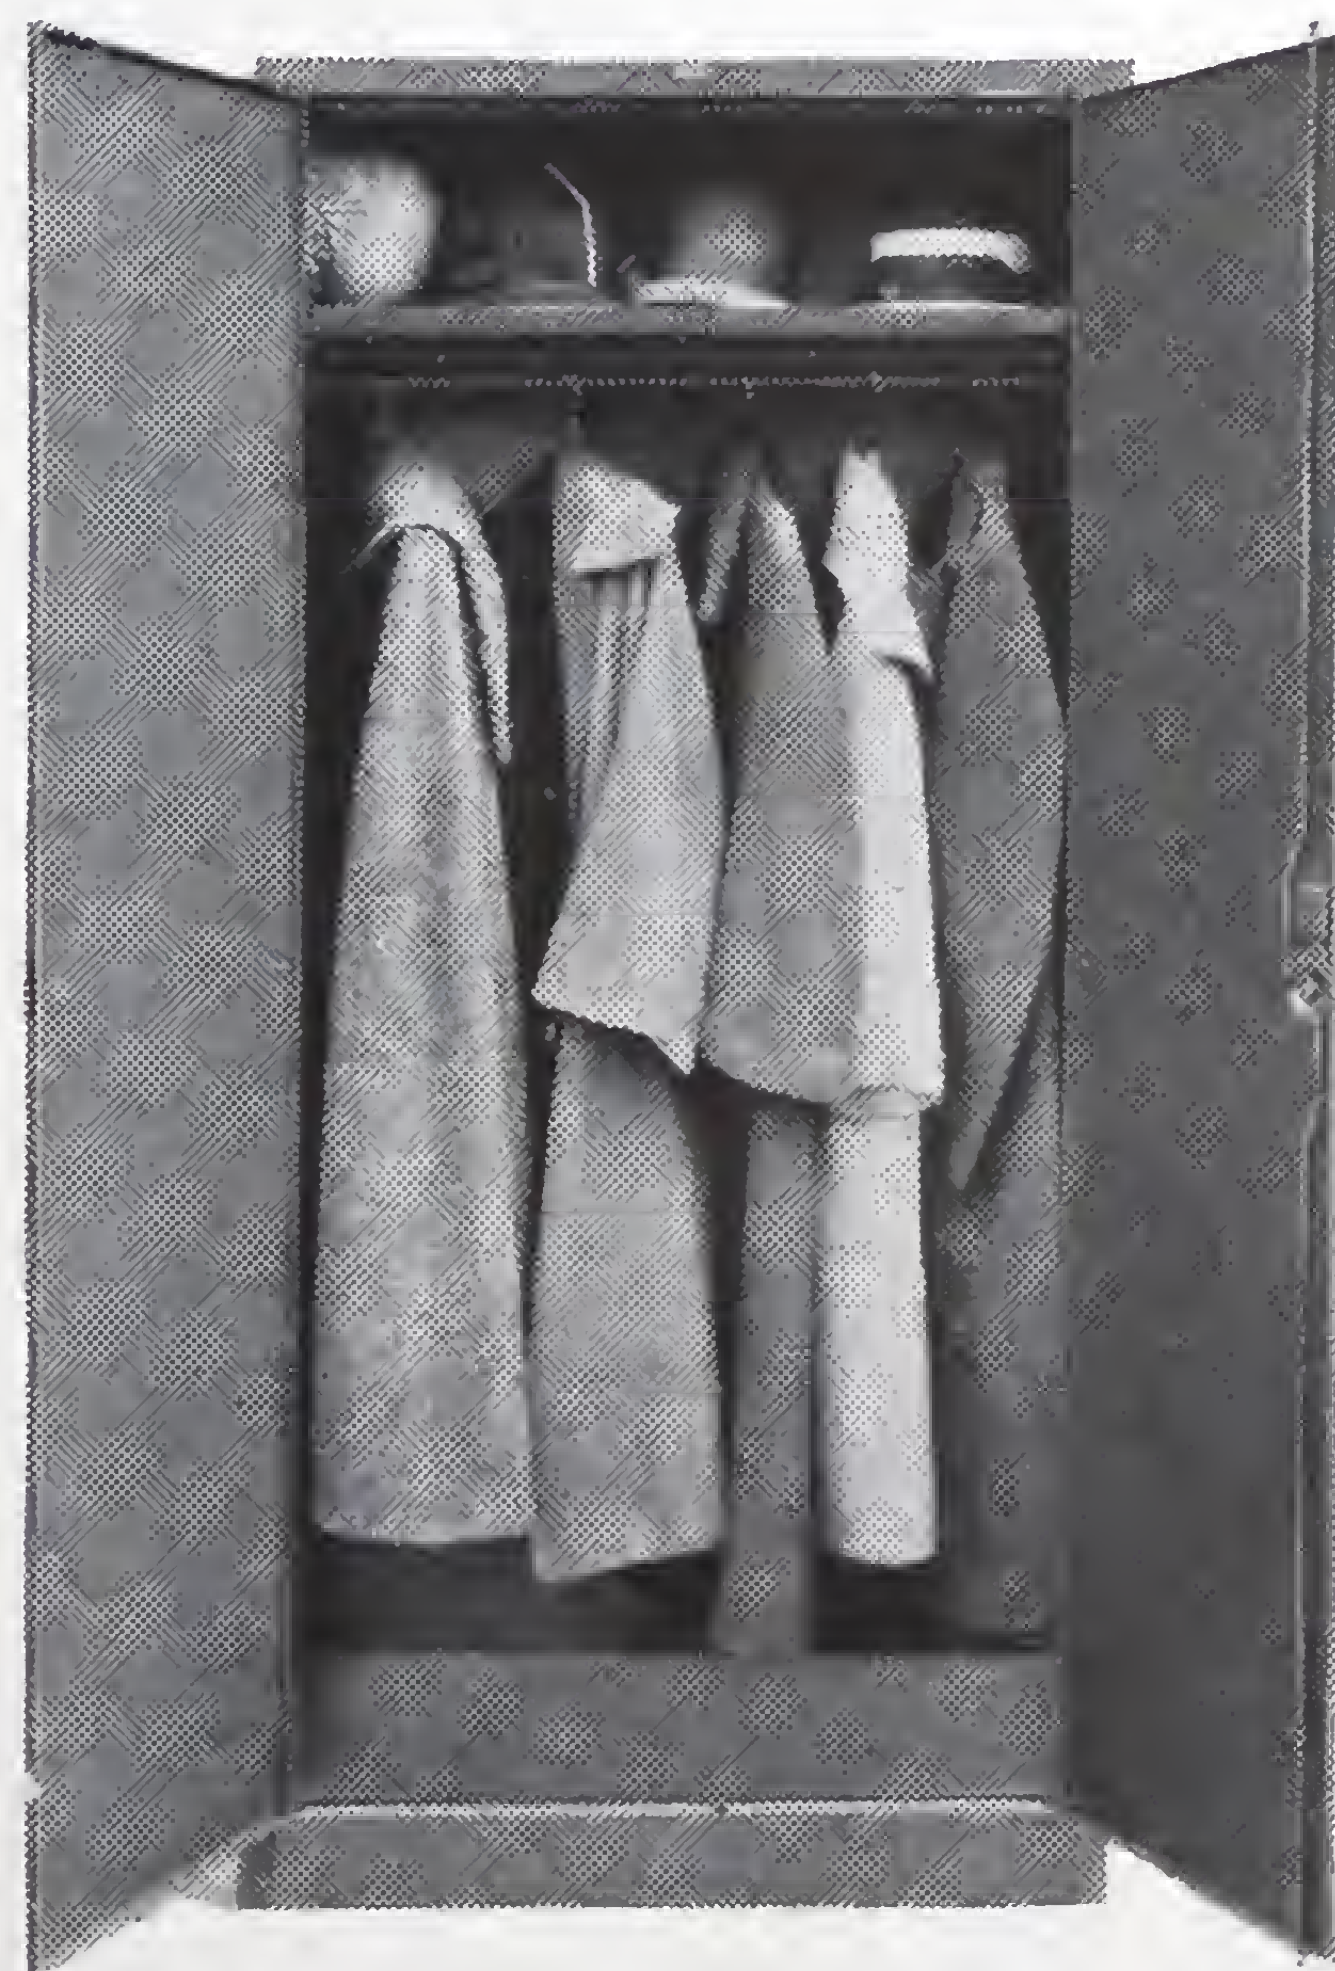

Dimensions: Base 22 x 22"; height 7 ft. Floor space 23 x 38". Shipped completely assembled.

Price, each \$27.00. Shipping weight 110 lbs. Cat. No. 863.

Wardrobe and Storage Cabinets

Storage Cabinet. Convenience, protection, security.

Wardrobe Cabinet. Locker accommodations for several persons.

Handsomely finished, strongly built cabinets for office, factory or store. Doors have 3-point locking device and master-keyed cylinder lock.

Wardrobe Cabinet has one shelf and coat hanger rod.

Storage Cabinet has five adjustable shelves.

Outside dimensions: 6 ft. 3 in. high, including solid base, 3 ft. wide, 18 in. deep. Finished in baked green enamel. Shipped set up.

Cat. No. 1076. Storage Cabinet. . . . \$48.00 Shipping weight 195 lbs.

Cat. No. 1077. Wardrobe Cabinet. . . 48.00 Shipping weight 225 lbs.

Junior Office Cabinet

A smoothly finished little desk companion for executive or stenographer. Carries stationery, office forms, dictating cylinders, private belongings, etc. Top relieves a crowded desk of many items. Good cylinder lock. Finished in baked green enamel.

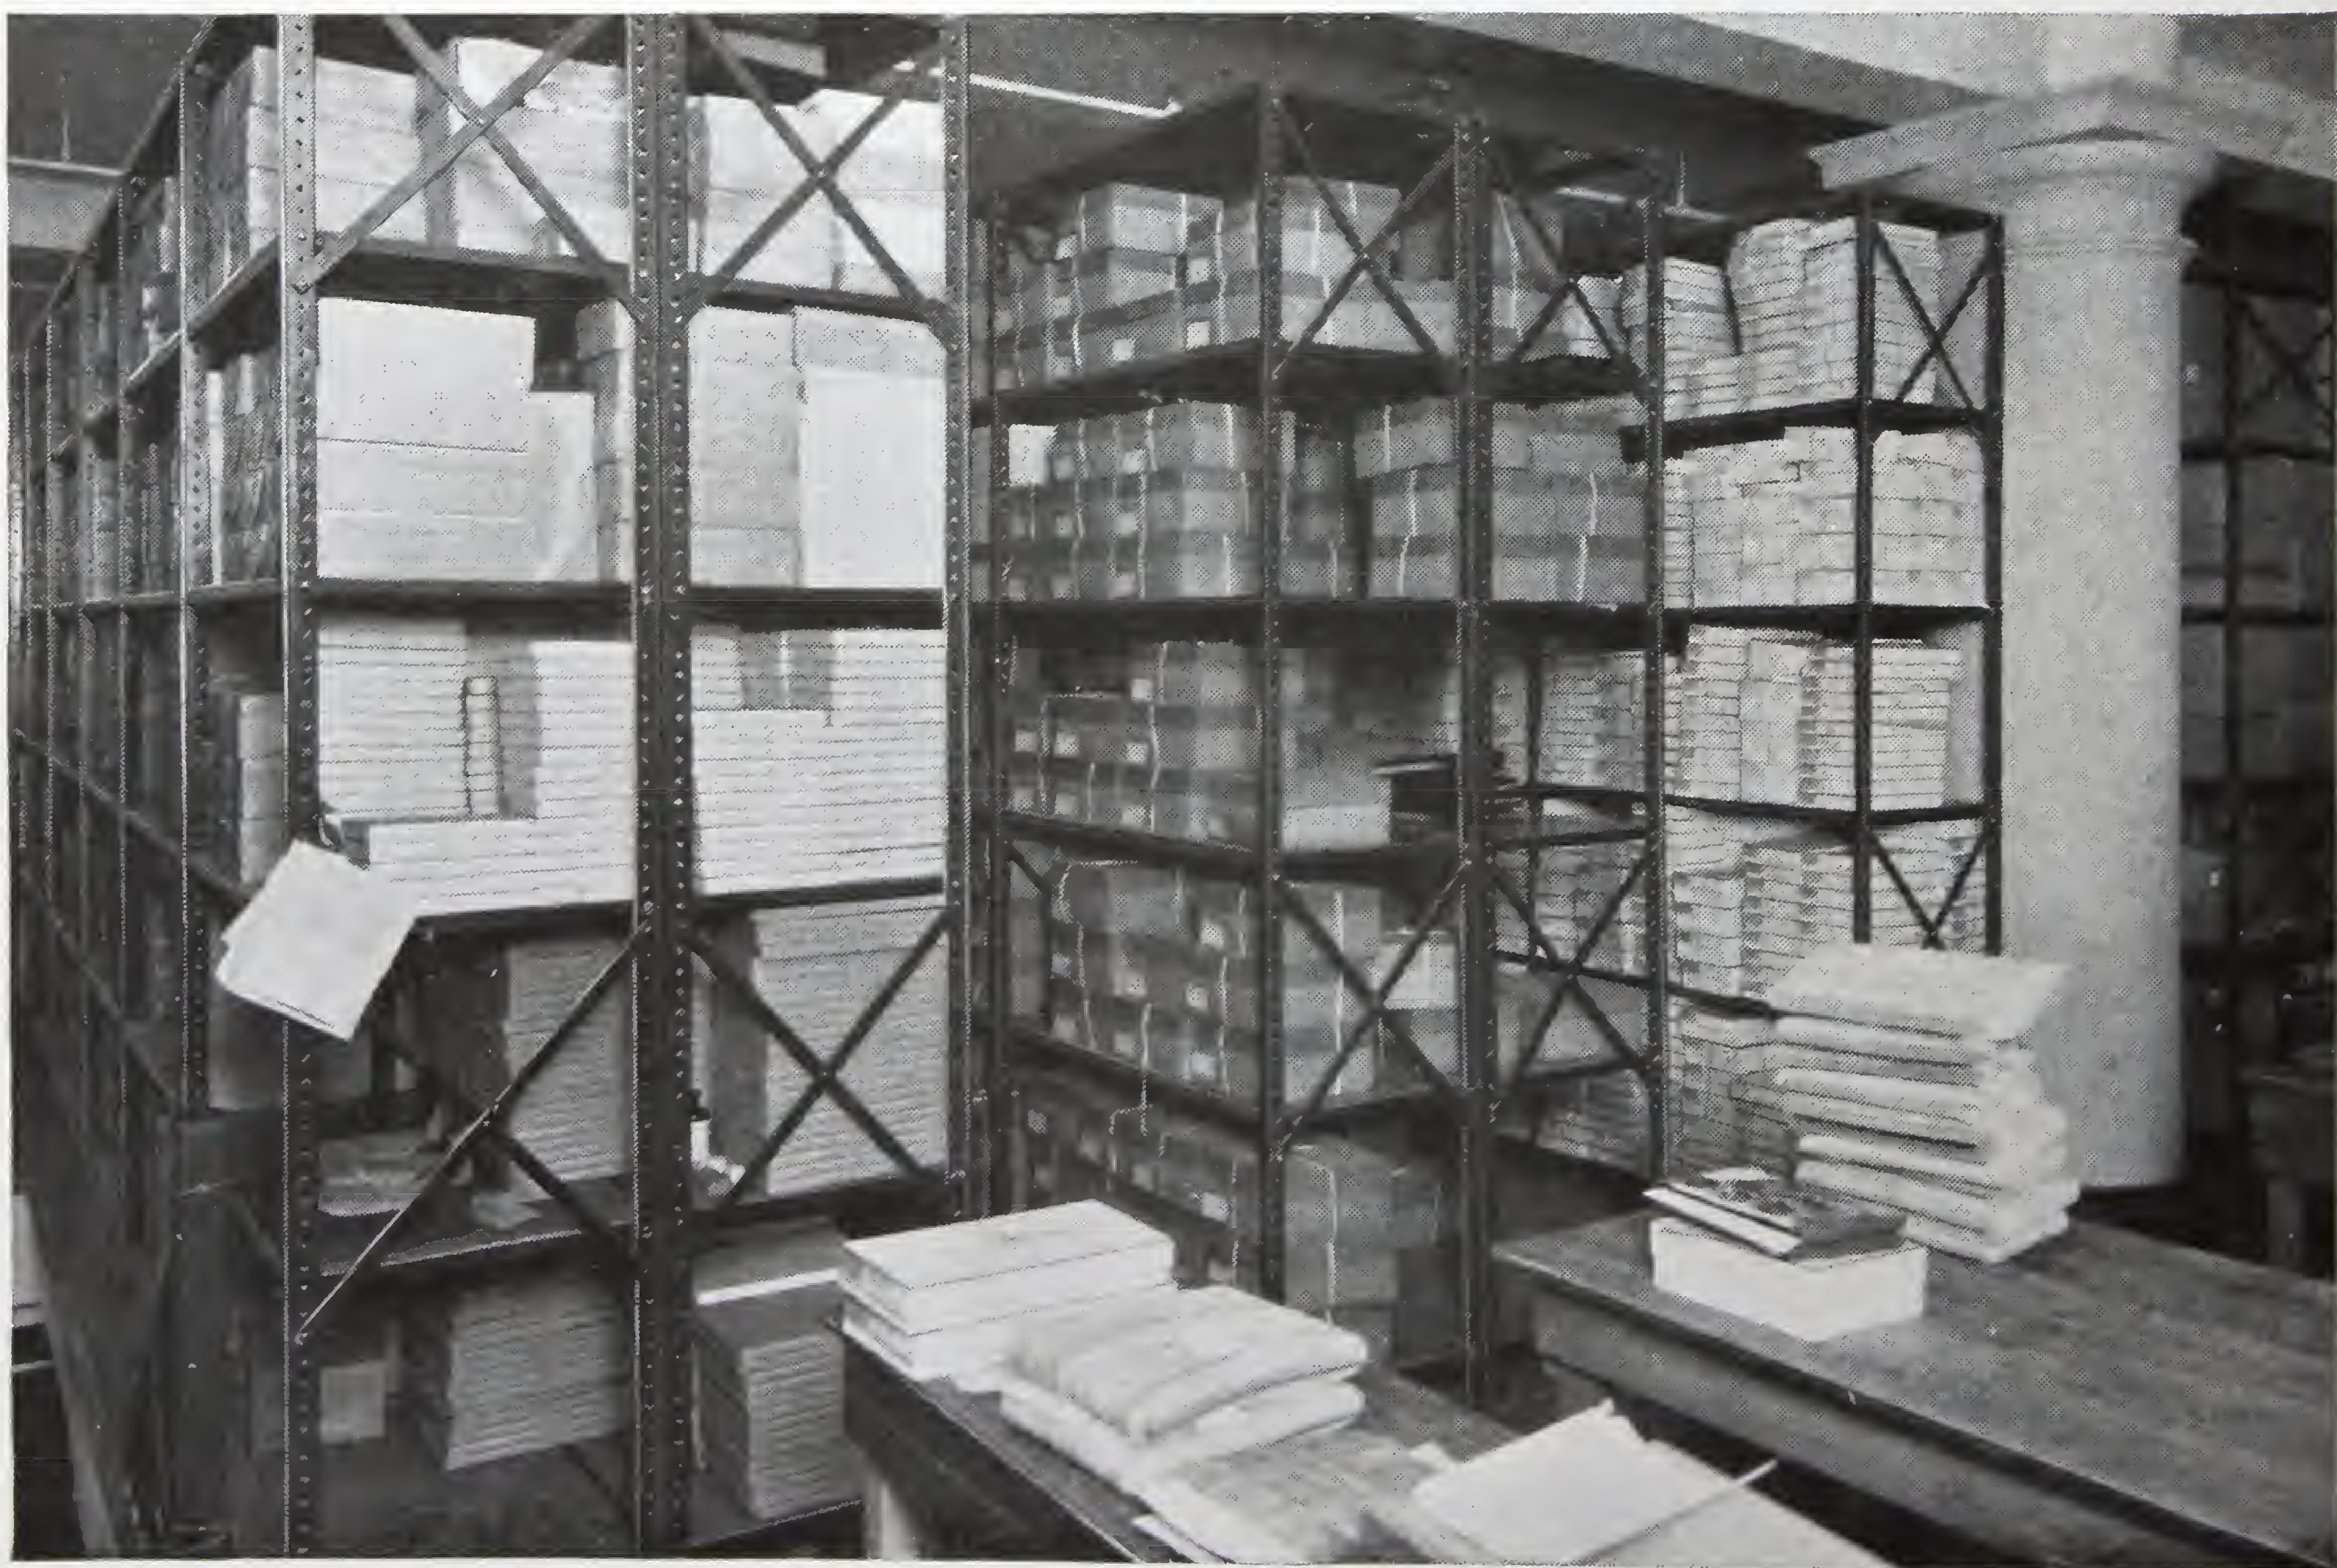

24" wide, 36" high, 16" deep.

Cat. No. 496. Price—\$25.20. Shipping weight 90 lbs.

FOR EFFICIENT STORAGE

LUPTON Bin Type Shelving carrying line and construction materials for a public utilities corporation. Not the least advantage of steel bins is a saving effected in insurance rates. This stock, if housed in wooden bins, would be burdened with a high insurance rate even though in a fire-proof building.

GOODMAN & Dessauer, New York City. Fine quality laces in boxes are stored in Lupton Rack Type Shelving. Whether the material be heavy or light, Lupton Steel Shelving can be used to excellent advantage.

FOR SELLING DISPLAY

L UPTON Display Shelving and Showcase are not only rigid and sturdy enough to meet the needs of the hardware store but of so refined an appearance that they fit nicely into the art store shown below. Lupton Steel Equipment may be used to advantage in almost any type of retail store.

The modern retail merchant realizes the value of display as a means of merchandising, and the demand for Lupton Steel Shelving and Display Counter as a sales accelerator is constantly increasing. Lupton Display Shelving is more than just shelving, because of its permanence and ability to withstand rough usage. Its velvet-green enamel finish lends itself to any surroundings and, with stock kept orderly, it "makes the store."

The picture at the right shows Lupton Steel Display Shelving in a hardware store. It ties up with the Lupton Showcase, which displays the stock to the customer.

CHIPP, Inc., importers of general merchandise, New York City. Lupton Display Shelving and Display Counter are used in this attractive show room, and aid materially in this company's merchandising. Another one of the many types of users of Lupton Steel Equipment.

NEATNESS IS "BUILT-IN."

THE ELECTRICAL TRADE finds every need provided for in Lupton Equipment. Fixtures, Appliances and Radio are nicely displayed on Lupton Shelving and in Lupton Showcase. Lamps and packaged goods are carried on Lupton Rack Type or Bin Type Shelving; Wiring supplies and fittings are indexed and stored in Lupton Units; Conduit of different sizes and types on the Lupton Bar Rack.

An electrical business, whether it be contracting or merchandising, or both, to keep abreast of the times, needs careful, orderly storage of materials as well as a trade-inviting "front." The Lupton-equipped shop or store has both. It sells more goods with a lower investment and at less expense.

TWO views of the salesroom of Pettingell-Andrews Co., electrical distributors, Boston, Mass., showing the excellent display afforded by Lupton Steel Shelving and Showcase.
